

Figure 6: Starting the emulator

Figure 7: App running on the emulator

Now all you have to do is to sit back and wait for the emulator to start and load your program. This can take some time, and it is important that you do not interfere while the emulator is loading your app.

Building the apk

Once you are happy that the app is working as you had expected, it's time to create the *apk* file for distribution.

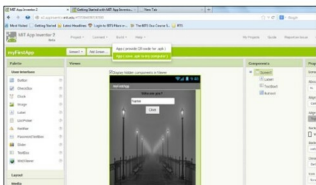

Figure 8: Building the apk

Go to the **Build** menu and you will find two options as shown in Figure 8.

Select the option to download the *apk* to your computer, and your download should start instantly. Once the *apk* file is downloaded, you can transfer it to any Android phone and install it.

There are many more features to be explored in AppInventor2. I am sure the basic knowledge provided in this article is more than enough to get readers started on building new apps.
