

```

class Users_Form extends moodleform {
    public function definition() {
        $form = $this->_form;

        //add a submit button with text as
        "List All Users"
        $mform->addElement('submit', 'block', "List All Users");
    }

    public function display_headings()
    {
        $PAGE->set_title("Users");
        $PAGE->set_heading("Users");
        echo $OUTPUT->header();
        echo $OUTPUT->heading("List of users");
    }

    public function display_users($users)
    {
        foreach($users as $record)
        {
            echo "<BR/>". $record->username;
        }
    }
}

```

?>

When 'List All Users' is clicked, the usernames of all those who have registered with your site will be displayed.

So, as shown in this article, it would be safe to say that MVC is popular due to its modularity, readability, maintainability, code reuse and more.

An alternative easier solution is to straightaway start coding without wasting time and effort in the designing phase, but the result would be a huge file with redundant and complicated code, which would make the solution not only inefficient but also unreadable and difficult to maintain.

This article is an attempt to showcase how MVC simplifies our lives! **END**
