

DVD OF THE MONTH

Enjoy the latest release of CentOS in this month's DVD.

An Enterprise-class Linux Distribution derived from the sources of Red Hat Enterprise Linux (RHEL). The latest release includes systemd, Gnome3, and a default filesystem of XFS. It also comes with Kernel 3.10.0 and supports Linux Containers.

CentOS 7

CentOS 7.0, an enterprise-class Linux distribution derived from sources freely provided to the public by Red Hat, released in July 2014. The OS bundled in this month's DVD is for 64-bit x86-compatible machines. There are many fundamental changes in this release, compared to previous releases of CentOS—notably, the inclusion of systemd, Gnome3 and a default filesystem of XFS. This major release comes with an updated version for most of the packages. The kernel is updated to 3.10.0 and has support for Linux containers. Other notable changes are:

- Open VMWare tools and 3D graphics drivers out-of-the-box
- OpenJDK-7 as default JDK
- In place upgrade from 6.5 to 7.0 (as already mentioned)
- LVM-snapshots with ext4 and XFS
- iSCSI and FCoE in kernel space
- Support for PTPv2
- Support for 40G Ethernet cards
- Support for installations in UEFI Secure Boot mode on compatible hardware
