

Samsung Gear Live, the Android Wear-based smart watch

Samsung has launched the Gear Live, which is an Android Wear-based smart watch. It is powered by the company's own Tizen operating system. Users can receive the latest posts and updates from social apps, can even chat from their preferred chat heads, and can be regularly notified on matters related to shopping, news or photography. The watch has a 4.14 cm super AMOLED 320×320 display and a 1.2 GHz processor. It has 512 MB of RAM with 4 GB storage. It comes in two colours—black and wine red. It is also equipped with a heart rate monitor. The watch's new update is said to be a wearable, modified version of Android 4.4 KitKat, and is labelled as version 4.4W for smart watches. It is powered by a 300mAh battery, measures 37.9×56.4×8.9 mm and weighs 59 grams.

This model is very similar to the Gear 2 on the outside, minus the camera at the top and the button at the bottom. It looks a lot like the original Galaxy Gear, in fact, but with a bezel edge that makes the screen seem a bit more like it's protruding from your wrist and has cleaner lines, overall. The minor tweaks are for the better, however, and this is overall a better-looking device than any of Samsung's older smart watches. Samsung offers some of its own apps for monitoring heart rates and activities, alongside the native Google-provided software for handling both.

Sony unveils its slimmest smartphone

Sony has launched its latest head-turner in the smartphone realm, the Xperia T3, supposedly crowned the world's thinnest 13.46 cm device. While most fans hated the Xperia T2 Ultra's screen, which was a little too big, the T3 comes with a more manageable screen and promises to slip into the tightest jean's pocket, making geeks, hipsters and geeky hipsters happy. Apart from the fact that this smartphone is quite ergonomic, it makes for a pretty good mid-range device.

The Sony Xperia T3 has a 720p HD screen resolution, an 8 MP rear camera with LED flash, a 1.1 MP front camera and a 1.4 GHz quad-core Qualcomm Snapdragon 400 processor. It has 1 GB of RAM and 8 GB of internal storage along with the microSD card support. It is 4G LTE enabled with Wi-Fi, Bluetooth, GPS, NFC, and a 2,500 mAh battery. The phone runs Android 4.4 KitKat and measures just 150.7×77×7 mm. Weighing approximately 148 grams, the Xperia T3 is a device you'll be comfortable pulling out of your pocket, time and again.

MTS launches the MBlaze Power Wi-Fi for high-speed Internet access

Sistema Shyam TeleServices Limited (SSTL), which provides telecom services under the brand MTS, has launched a unique product—the MTS MBlaze Power Wi-Fi. This is a one-of-its-kind integrated device, which ensures that today's smartphone and tablet users never run out of battery and have constant access to high-speed Internet. MBlaze Power Wi-Fi packs a 5200 mAh battery bank, which can fully charge a smartphone up to three times faster. It can provide high-speed data connectivity to up to six devices, including smartphones, tablets, laptops, smart TVs and gaming consoles on MTS' 3GPlus telecom network.

MTS MBlaze Power Wi-Fi comes with media sharing capabilities allowing users connected through Wi-Fi to share documents, songs, videos and pictures. Users can store up to 32 GB of data on the power bank through a memory card. The device has been made available in pre-paid as well as post-paid modes. It is available at all MTS branded retail stores and with leading online retailers.
