

Expect Android Wear app section along with Google Play Service update

Google recently started rolling out its Google Play Service update 5.0 to all the devices. This version is an advance from the existing 4.4, bringing the Android wearable services API and much more. Mainly focused on developers, this version was announced in 2014. According to the search giant's blog, the newest version of the Google Play store includes many updates that can increase app performance. These include wearable APIs, dynamic security provider, improvements in Drive, Wallet and Google Analytics, etc. The main focus is on the Android Wearable platform and APIs, which will enable more applications on these devices. In addition to this, Google has announced a separate section for Android Wear apps in the Play store.

These apps for the Android Wear section in the Google Play store come from Google itself. The collection includes official companion apps for Android devices, Hangouts and Google Maps. The main purpose of the Android Wear Companion app is to let users manage their devices from Android smartphones. It provides voice support, notifications and more. There are third party apps as well from Pinterest, Banjo and Duolingo.

Google plans to remove QuickOffice from app stores

Google has announced the company's future plans about Google Docs, Slides and Sheets. It has integrated the QuickOffice service in Google Docs now. So, there is no longer a need for the separate Google QuickOffice app. QuickOffice was acquired by Google in 2012. It served free document viewing and editing on Android and iOS for two years. Google has decided to discontinue this free service.

The firm has integrated QuickOffice into the Google Docs, Sheets and Slides app. The QuickOffice app will be removed from the Play Store and Apple's App Store soon and users will not be able to see or install it. Existing users will be able to continue to use the old version of the app.

CALENDAR OF FORTHCOMING EVENTS

Name, Date and Venue	Description	Contact Details and Website
4th Annual Datacenter Dynamics Converged September 18, 2014; Bengaluru	The event aims to assist the community in the data centre domain by exchanging ideas, accessing market knowledge and launching new initiatives.	Praveen Nair; Email: Praveen.nair@datacenterdynamics.com ; Ph: + 91 9820003158; Website: http://www.datacenterdynamics.com/

New podcast app for Linux is now ready for testing

An all-new podcast app for Ubuntu was launched recently. This app, called 'Vocal', has a great UI and design. Nathan Dyer, who is the developer of this project, has released unstable beta builds of the app for Ubuntu 14.04 and 14.10, for testing purposes.

Only next-gen easy-to-use desktops are capable of running the beta version of Vocal. Installing beta versions of the app on Ubuntu is not as difficult as installing them on KDE, GNOME or Unity, but users can't try the beta version of Vocal without installing the unstable elementary desktop PPA. Vocal is an open source app, and one can easily port it to mainstream Linux versions from Ubuntu. However, Dyer suggests users wait until the first official beta version of the app for easy-to-use desktops is available.

The official developer's blog has a detailed report on the project.

CoreOS Linux comes out with Linux containers as a service!

CoreOS has launched a commercial service to ease the workload of systems administrators. The new commercial Linux distribution service can update automatically. Systems administrators do not have to perform any major update manually. Linux-based companies like RedHat and SUSE use open source and free applications and libraries for their operations, yet offer commercial subscription services for enterprise editions of Linux. These services cover software, updates, integration and technical support, bug fixes, etc.

CoreOS has a different strategy compared to competitive services offered by other players in the service, support and distribution industries. Users will not receive any major updates, since CoreOS wants to save you the hassle of manually updating all packages. The company plans to stream copies of updates directly to the OS. CoreOS has named the software 'CoreUpdate'. It controls and monitors
