

Other bugs which were fixed were not security related but of a more general type.

iberry introduces the Auxus Linea L1 smartphone and Auxus AX04 tablet in India

In a bid to expand its portfolio in the Indian market, iberry has introduced two new Android KitKat-powered devices in the country—a smartphone and a tablet. The Auxus Linea L1 smartphone is priced at Rs 6,990 and the Auxus AX04 tablet is priced at Rs 5,990. Both have been available from the online megastore eBay India, since June 25, this year.

The iberry Auxus Linea L1 smartphone features a 11.43 cm (4.5 inch) display with OGS technology and Gorilla Glass protection. It is powered by a 1.3GHz quad-core MediaTek (MT6582) processor coupled with 1 GB of DDR3 RAM. It sports a 5 MP rear camera with an LED flash and a 2 MP front-facing camera. It comes with 4 GB of inbuilt storage expandable up to 64 GB via microSD card. The dual-SIM device runs Android 4.4 KitKat, out-of-the-box. The 3G-supporting smartphone has a 2000mAh battery.

Meanwhile, the iberry Auxus AX04 tablet features a 17.78 cm (7 inch) IPS display. It is powered by a 1.5 GHz dual-core processor (unspecified chipset) coupled with 512 MB of RAM. The voice-supporting tablet sports a 2 MP rear camera and a 0.3 MP front-facing camera. It comes with 4 GB of built-in storage expandable up to 64 GB via microSD card slot. The dual-SIM device runs Android 4.4 KitKat out-of-the-box. It has a 3000mAh battery.

Google to splurge a whopping Rs 1,000 million on marketing Android One

Looks like global search engine giant Google wants to leave no stone unturned in its quest to make its ambitious Android One smartphone-for-the-masses project reach its vastly dispersed target audience in emerging economies (including India). The buzz is that Google is planning to splurge over a whopping Rs 1,000 million with its official partners on advertising and marketing for the platform.

Even as Sundar Pichai, senior VP at Google who is in charge

of Android, Chrome and Apps, is all set to launch the first batch of low budget Android smartphones in India sometime in October this year, the latest development shows how serious Google is about the project.

It was observed that Google's OEM partners were forced into launching a new smartphone every nine months to stay ahead in the cut-throat competition. However, thanks to Google's new Android hardware and software reference platform, its partners will now be able to save money and get enough time to choose the right components, before pushing their smartphones into the market. Android One will also allow them to push updates to their Android devices, offering an optimised stock Android experience. With the Android One platform falling into place, Google will be able to ensure a minimum set of standards for Android-based smartphones.
