

Durability

As an SSD does not have any moving parts like a motor and uses a flash-based medium for storing data, it is more likely to keep the data secure and safe. Some of the SSDs are coated with metal, which extends their life. There are almost no chances of their getting damaged. Even if you drop your laptop or PC, the data stays safe and does not get affected.

Power consumption

In comparison to a HDD, a solid state drive consumes minimal power. "Usually, a PC user faces the challenge of a limited battery life. But since an SSD is 100 per cent solid state technology and has no motor inside, it consumes less energy; hence, it extends the life of the battery and the PC," adds Rajesh Gupta.

There are plenty of other reasons for choosing a SSD over a HDD. These include the warranty, cost, efficiency, etc. "Choosing a SSD can save you the cost of buying a

new PC by reviving the system you already own," adds Parekh.

A few options to choose from

Many companies, including Kingston, ADATA and Sandisk, have launched their SSDs and it is quite a task trying to choose the best among them. Kingston has always stood out in terms of delivering good products to not just the Indian market but worldwide. Ashu Mehrotra, marketing manager, ADATA, speaks about his firm's SSDs: "ADATA has been putting a lot of resources into R&D for SSDs, because of which its products provide unique advantages to customers." Gupta says, "Sandisk is a completely vertically integrated solutions provider and is also a key manufacturer of flash-based storage systems, which are required for SSDs. Because of this, we are very conscious about the categories to be used in the SSD. We also make our own controllers and do our own integration."

HyperX Fury from Kingston Technology

- It is a 6.35 cm and 7 mm solid state drive (SSD)
- Delivers impressive performance at an affordable price
- It speeds up system boot up, application loading time and file execution
- Controller: SandForce SF-2281
- Performance: SATA Rev 3.0 (6 GBps)
- Read/write speed: 500 MBps to boost overall system responsiveness and performance
- Reliability: Cool, rugged and durable drive to push your system to the limits
- Warranty: Three years

Extreme PRO SSD from Sandisk

- Consistently fast data transfer speeds
- Lower latency times
- Reduces power consumption
- Comes in the following capacities: 64 GB, 128 GB and 256 GB
- Speed: 520 MBps
- Compatibility: SATA Revision 3.0 (6 GBps)
- Warranty: Three years
