

“At this moment in India, we are targeting only the low-cost smartphone market, which can be considered as the feature phone replacement market. So, any OEM ready to work in that segment is welcome to join the journey.”

Q What do you think are going to be the challenges that you will face when it comes to spreading the word about the Firefox OS in India?

Right now, we need to spread awareness about the OS amongst the users. Currently, awareness about the Firefox OS is limited to the Firefox browser users. So we will resort to various means of reaching out to the potential users of the Mozilla Firefox ecosystem in the country. We would not want to restrict ourselves to just Tier 1 cities but would also like to penetrate deeper into the smaller cities and towns with our affordable and user-friendly devices.

Q What is Mozilla doing to nurture the developers' ecosystem in India with respect to the Firefox OS?

We already have a community of thousands of developers in

India and they would love to bring in local applications for the OS, which will be more suitable for the Indian market. We would also work with our partners to bring in local Indian content. So in the phone, a user can easily search for local content. With every app that we have on the app store, we try to address the local audience to make the ecosystem friendlier.

Q But how do you plan to compete with the ecosystem that Android has already created with respect to the developers and user adoption as well?

We try to compete only on the level of the top 100 chosen applications that the Indian people use. So we will try to partner with the makers of those applications to bring them inside the Mozilla ecosystem.

Q Which are the other OEMs you are working with, or plan to work with, in India?

We have lined up a lot of Indian companies who are excited to work on the Mozilla ecosystem. At this moment in India, we are targeting only the low-cost smartphone market, which can be considered as the feature phone replacement market. So, any OEM ready to work in that segment is welcome to join the journey. The Firefox OS is very flexible for OEMs to adopt. So we are looking at more cooperation from OEM partners.
