Open Source India 2014, a two-day event focusing on the collaboration between the industry and the community, witnessed a whopping 7500+ registrations. At the event, the queues outside registration booths began to form almost an hour before the scheduled time. People who already had a Silver Pass wanted to upgrade it to a

Silver Plus, Gold or Platinum, in order to attend more sessions and workshops. By noon of the first day, i.e., on November 7, the organisers reluctantly stopped issuing passes for several tracks and workshops because of non-availability of seats.

Taking open source technology to another level, OSI was packed with nearly 45 sessions by eminent speakers like Lux Rao (CTO, technology services, HP), C N Krishnan (programme director, Anna University), Aahit Gaba (open source attorney, Lyra Infosystems Pvt Ltd) and Jacob Singh (regional director, Acquia India). Talks on FOSS for everyone, the cloud, mobile app development, databases, Web development, kernel development, the OpenStack mini conference, IT infrastructure management and the 'Success Stories' track were all conducted on time.

Major highlights of the event

Record-breaking attendance for the keynotes and workshops: Extra seating had to be arranged for all the keynote sessions and the workshops. All the four keynote sessions witnessed a major turnout and the crowds seemed to be a highly satisfied lot. The same could be said of the workshops, which were also a total hit and were much talked about.

The 'Success Stories' track: This was introduced in the 10th edition of Open Source India and was much talked about at the event by the speakers and the attendees. CIOs and CTOs of prominent companies like Rediff.com, Goibibo, bookmyshow.com, Justdial, Patterbuzz, Mahindra & Mahindra Financial Services Ltd, and Karunya University shared their experiences of implementing open source in their respective organisations. Talking to our correspondent after his talk, Sandipan Chattopadhyay, CTO, Justdial, said, "Well, it keeps getting more and more interesting every time and the crowd was more interactive. This time, there are a lot of young people who have come in and they are asking a lot of questions. The event is better organised, and is a lot more focused."

The HP and Microsoft tech challenges: Long
