

## OSI Days 2014 Fact Sheet

- Footfalls: 1500 unique visitors
- No. of speakers: 60+
- No. of hands-on workshops 8
- Partners: Microsoft, HP Helion, Zimbra, Unotech, Wipro, MongoDB, and Oracle
- Registrations: 7500+

The Penguin was omnipresent at Open Source India, as always

A big thank you to all our advisors and speakers for making the event a grand success

I go to many open source events all around the world, where the industry meets innovation. Open source is the core of such innovation. I am really excited to be here in India. For Microsoft, this is the fifth year for supporting Open Source India. Looking at the community, the opportunity is really big – the strength of the community is really big. The cloud is really changing and so is the technology. OpenCloud, OpenStack and open source are the future of our industry.

We're committed to supporting this community and its projects, and to our partners and customers using open source.

### Any suggestions for the next year...

Well, I think there are a number of projects being represented in this event. OpenStack is one of them, but there are many other technologies out there, such as containers, Docker, etc, which compose the ecosystem of open source. So I think these should be the topics to be covered next year. I would definitely love to be associated with OSI the next year.

—Jose Miguel Parrella, CTO, M & O, Microsoft Corp.

OSI was more interesting this time and there was more interaction with the crowd. This wasn't the case last year; there were knowledgeable people last year too, but this time there were a lot of young people who asked a lot of questions. The event was better organised and a lot more focused. It was a plus plus event, as compared to the last year.

### Any suggestions for the next year...

Unfortunately, I couldn't spend much time at the event, but I do believe that the workshops have increased, which is a good thing. Maybe you could end the event with a hackathon or have a place for start-ups to come and talk about their problems. You should plan the program for the next year, too, and share it at the event. You could announce the big activities you plan to conduct the next year, so that people can plan their participation for the next year too. I look forward to OSI 2015.

—Sandipan Chattopadhyay, CTO, Justdial

I think the event is great and it is amazing to see what's going on with open source here in India. I loved the energy and excitement here. The people who came to the HP booth knew so much about the new technologies and were very up to date with respect to the knowledge on open source. It's been a great event. Maybe we could have more tracks with more specialities, and have the event for one more day. The event has been conducted already for 11 years, and

there is clearly good work put into it. I would love to be a part of it next year too.

—Rajiv Pandey, distinguished technologist, HP Cloud

I was really surprised, positively surprised by this event. I was kind of expecting a smaller event but this is really, really huge. A lot of people are so enthusiastic about open source. I think one can learn a lot here; a lot of people were really looking forward to learn on this platform, which is very positive.

### Any suggestions for the next year...

There are no changes I would want in the next one! Take it as a compliment.

—Michael Meskes, CEO, Credativ International GmbH
