

```
[root@localhost etc]# useradd u3
[root@localhost etc]# ls /home
u1 u2
[root@localhost etc]# ls /ghar
u3
[root@localhost etc]# ls /ghar/u3
Welcome
[root@localhost etc]# █
```

Figure 3: Listing of the home directory

```
# groupadd -g 2222 testgroup
```

By default, every group should have a unique group ID, but a non-unique group ID can be forcibly shared among different group names using `-o` as follows:

```
# groupadd -o -g 2222 newgroup
```

We can verify the result of above commands in `/etc/group`.

Altering existing users and groups

The `usermod` and `groupmod` commands (with options that are the same used in creation) are used to alter the information, while `userdel` and `groupdel` commands are used to delete existing users and groups, respectively.

To change the user ID and secondary group of 'myuser', type:

```
# usermod -u 3333 -G newgroup myuser
```

Now, verify `/etc/passwd` and `/etc/group` files.

To change the name of 'newgroup' to 'ngroup', type:

```
# groupmod -n ngroup newgroup
```

To modify 'gid' of 'ngroup' from '2222' to '4444', type:

```
# groupmod -g 4444 ngroup
```

To delete an existing group – 'testgroup', type:

```
# groupdel testgroup
```

To delete an existing user 'u2', type:

```
# userdel u2
```

To delete an existing user 'u2' along with its home directory, type:

```
# userdel -r u2 
```
