

reiterates the spirit with which it pushes its mobile OS for phones and tablets.

Google has great hopes for porting its technology to cars as well. According to a blog post, Patrick Brady, director of Android Engineering, stated, "Wouldn't it be great if you could bring your favourite apps and music with you, and use them safely with your car's built-in controls and in-dash display? Together with our OAA partners, we're working to enable new forms of integration with Android devices, and adapting Android for the car to make driving safer, easier and more enjoyable for everyone. Putting Android in the car will bring drivers apps and services they already know and love, while enabling automakers to more easily deliver cutting-edge technology to their customers."

However, it still remains to be seen whether Apple or Google will dominate in-car apps.

New Ubuntu phones from major OEMs to be available only in 2015: Jono Bacon

Canonical's community manager, Jono Bacon, has said that while he would love to see major OEMs/carriers shipping Ubuntu handsets, he'd be 'surprised' if any hit the market before 2015. The news definitely shatters hopes of 'household brands' shipping Ubuntu-powered phones anytime before 2015.

Bacon has revealed that smaller manufacturers serving specific regions are most likely to bring out the first wave of Ubuntu-powered devices. The strategy has been adopted keeping in view a far-sighted goal—that of aiding Canonical in courting bigger players, both on the hardware and the software side, in the long run. Canonical plans to target the mid-range and high-end with its mobile OS and is aware of the fact that entering a market with well-known, established loyalties fixed firmly in place will pose a problem for them.

"I think the ideal [Ubuntu Phone] customer today is someone who wants a dependable device, but [one who] does not require a large catalogue of specific apps (as we don't have many of them yet)," Bacon said. Impressive sales of an Ubuntu-powered phone would act as bait to other OEMs and ISVs, leading to renewed interest for the same, insists Bacon.

Korora 20 released

For all the Fedora fans out there who want to try their hands at something 'extra', Korora 20 is an option. The 20th edition of Korora, a Fedora-based distribution, has arrived with some extra tweaks and features. The distro makes the system work out-of-the-box. It provides an easy-to-use system for general computing.

Dubbed as Peach, Korora 20 is based on Fedora 20 Heisenberg. This version of Korora is stable as the developers of the distro have closely followed the Fedora 20 cycle. Korora 20 comes with a choice of five versions of desktop environments including GNOME, MATE, KDE, Cinnamon and Xfce. Some default applications added in the distro are Adobe Flash, Google Chrome, Google Earth, RPMFusion and VirtualBox.

Making the official announcement on Korora 20, the developers said, "This release is backed by a significant amount of work by the team and community to bring not two but 'five desktops' that have been shaped for a genuine Korora experience. The additions of Cinnamon, MATE and Xfce represent the growth of our community and its contributions. Thank you to all who have contributed to make this possible."

Are You In Suspense?

Are you wondering what happened to your order or payment, even after a fortnight? But did you mention your name and address clearly while sending payment, and what the payment was for?

We get several payments every month without adequate instructions or even identity of the person sending the payment. As a result we are unable to take appropriate action on these, till we get a complaint - if at all.

At EFY, we want you to be our satisfied customer. So please do let us know in case your payment or instructions are not even acknowledged within a fortnight. We are not that lazy!
