

Ubuntu stores your Wi-Fi passwords, by default!

ubuntu

Ubuntu is not as secure as you perhaps thought it to be. According to reports, the Linux-driven distribution stores its Wi-Fi profiles outside its *Home* folder, which makes them more accessible. This includes passwords for the Wi-Fi profiles. Reports say that a user pointed out that Wi-Fi passwords on Ubuntu aren't encrypted as they are stored outside the *Home* folder. This folder, though, can be encrypted during the OS' installation. "I recently stumbled over the fact that NetworkManager, by default, stores Wi-Fi profiles 'including clear text passwords' under `/etc/NetworkManager/system-connections/`. I think that this is not what one expects when one turns on *Home folder encryption* and because of that, this should be corrected somehow," Softpedia quoted user Per Guth from a mailing list.

The issue is apparently a result of the option, 'All users may connect to this network', that is enabled by default. In order to switch this feature off, users have to open the *Network Indicator* and go to *Edit Connections*. Then choose *Select Network* and click on *Edit*. In the *General* tab here, uncheck the option in order to switch it off.

Unchecking the option reportedly moves the password into the required folder, but the Softpedia report speculated that the majority of users wouldn't be aware of this issue. Whether Canonical will make any changes to this or not remains to be seen.

CALENDAR OF FORTHCOMING EVENTS

Name, Date and Venue	Description	Contact Details and Website
4th Annual Datacenter Dynamics Converged April 24, 2014; Mumbai	The event aims to assist the community in the datacentre domain in exchanging ideas, accessing market knowledge and launching new initiatives	Email: info@datacenterdynamics.com ; Ph: 22 6636 4332 http://www.datacenterdynamics.com/conference
9th Annual Datacenter Dynamics Converged May 26, 2014; Dubai	The event aims to assist the community in the datacentre domain by exchanging ideas, accessing market knowledge and launching new initiatives	Email: info@datacenterdynamics.com ; Ph: 22 6636 4332 http://www.datacenterdynamics.com/conference
2nd Annual The Global 'High on Cloud' Summit May 28th and 29th; Mumbai	The summit will address the issues, concerns, latest trends, new technology and upcoming innovations on the Cloud platform. It will be a open forum, giving an opportunity to everyone in the industry to share their ideas.	Email: contactus@besummits.com ; Ph: 80-4963 7000; Website: http://www.theglobalhighoncloudsummit.com/#about-the-summit/c24fs
4th Annual Datacenter Dynamics Converged September 18, 2014, Bengaluru	The event aims to assist the community in the datacentre domain in exchanging ideas, accessing market knowledge and launching new initiatives	Email: contactus@besummits.com ; Ph: 80-4963 7000; Website: http://www.theglobalhighoncloudsummit.com/#about-the-summit/c24fs
Open Source India, November 7-8, 2014 NIMHANS Center, Bengaluru	It is the premier Open Source conference in Asia that aims to nurture and promote the open source ecosystem in the sub-continent.	Atul Goel-Sr.Product & Marketing Manager; Email: atul.goel@elyindia.com ; Mob no: 0880 009 4211
5th Annual Datacenter Dynamics Converged December 9; Riyadh	The event aims to assist the community in the datacentre domain by exchanging ideas, accessing market knowledge and launching new initiatives	contactus@besummits.com ; Ph: 80 4963 7000; Website: http://www.theglobalhighoncloudsummit.com/#about-the-summit/c24fs

Twitter co-founder brings Jelly App that will offer better search results

The co-founder of Twitter has unveiled an all new smartphone app dubbed Jelly. He claims that this will improve the way users get online search results, as it queries people about their searches.

On a video posted on the company's website, Biz Stone, CEO and co-founder of Jelly (and earlier of Twitter) said, "Everyone is mobile, everyone is connected. So if you have a question, there's somebody out there who knows the answer." Stone left Twitter in June 2011.

This new mobile service is available free for both Apple's iOS and Google's Android devices. Users can submit their questions to the network of friends that they have made through social networks like Twitter and Facebook. Users can leave a question or even a picture if they want to identify an object. Let's see how many takers this one gets!

You can turn your Android set-top boxes into gaming consoles!

Pune-based firm 18th Parallel has launched a middleware that can convert your Android set-top box (STB) into a gaming console. "There are several Android devices out there that have the power to run games, but are not used for it because it is not always possible to play games on them, the way one can on mobile phones. But if they integrate Cannonball, then gamers can use a controller of their choice, or service providers could offer their own custom controllers to anyone who subscribes to such a service," Pune-based 18th Parallel co-founder Nishith Shah was quoted by MediaNama.

18th Parallel's middleware, called 'Cannonball', can convert any standalone Android device—a phone, tablet or even a set-top box into a micro-console. This it does by creating an overlay on the Android device, following
