

which gamers will be able to use Xbox 360, PlayStation or even Logitech controllers to play mobile games without any sort of optimisation from game developers. Cannonball will also explain to gamers the control scheme that needs to be followed every time they launch a game. It is also possible to use a smartphone to control the games being played on set-top boxes.

MYIR introduces low-cost ARM boards for TI Sitara AM335x MPUs

MYIR has released a development board family – the MYD-AM335X based on the 720MHz Texas Instruments (TI) Sitara AM335x (AM3352, AM3354, AM3356, AM3357, AM3358 and AM3359) ARM Cortex-A8 Microprocessors (MPUs), which are ideal for home automation, industrial automation, enterprise/educational tablets, portable navigation devices and networking. The boards have a commonly-used base board and use MYC-AM335X series CPU modules as core boards. They can support Linux, Android and Windows CE7 high-level operating systems, and work in harsh environments of -40° to +85° Celsius for industrial embedded applications.

MYIR is using the 15x15 mm, 0.8-mm ball pitch, ZCZ package AM335x ARM CPU on the MYC-AM335X CPU module, which is a SOM (System on Module). It has the core components of an AM335x processor, 512 MB DDR3 SDRAM, 512 MB Nand Flash and Gigabit Ethernet PHY chip-on-board, and can be served as the core of your embedded system. It has two 2.0 mm pitch 60-pin male expansion connectors, one 2.0 mm pitch 26-pin interface and one 2.0 mm pitch 10-pin interface to allow extensions of all the controller signals and ports to the base board through headers and connectors, thus exposing more features of the AM335x Cortex-A8 processors.

Indian government to launch Netra, an Internet spy system

The government is soon going to release 'Netra', which is an Internet spy system for detecting mala fide messages. Currently, Netra is getting the finishing touches from the Home Ministry. The spy system will be deployed by all security agencies to capture any dubious voice traffic passing through software like Skype or Google Talk, apart from write-ups in tweets, status updates, emails, instant messaging transcripts, Internet calls, blogs and forums.

The Netra Internet spy system has been developed by the Centre for Artificial Intelligence and Robotics (CAIR), which is a lab under the Defence Research and Development Organisation (DRDO).

According to a Home Ministry note on Netra, "The specifications of the Netra system can be taken as frozen, following tests by the Intelligence Bureau and Cabinet Secretariat, and can be considered for providing multiple user access to security agencies."

Android will have one billion active users in 2014, predicts Gartner

Android is going places! After reaching out to wearable devices, home appliances and even automobiles, Android is set to create a new benchmark. According to research firm, Gartner, Android will reach the mark of one billion devices in active use in 2014.

It is noteworthy that Android has already reached the milestone of one billion activations, but the number of active users of the platform is less than 1 billion, as of now. Gartner has said that the final number of active users on Android will be 1.1 billion by the end of this year. That would be about a 26 per cent increase from 2013.

In its research report, Gartner has also stated that one billion active users are expected from the emerging markets, where Android is considered a very important player, courtesy the budget smartphones and tablets that run on it. The research firm has also predicted that Google's Chrome OS will more than double its user base this year, from the existing 1.8 million users in 2013 to 4.7 million in 2014. It is poised to reach as many as 8 million users in 2015, stated Gartner.
