Drupal	GPLv2 or later	PHP	Content management framework, Content Management System, community and blog software	Cross-platform
Joomla!	GNU GPL	PHP	Content management framework, Content Management System	Cross-platform

Magic Quadrant (a series of market research reports on key technologies, periodically released by the US-based advisory and research firm). Alfresco remains in the "Visionaries quadrant" section. It supports open standards such as Content Management Interoperability Services (CMIS). It offers interoperability with other CMSs such as Joomla, Google Docs, Liferay, salesforce.com, Drupal, Jive and IBM Connections. Alfresco has increased its presence on the world map through its partner ecosystem, which includes systems integrators, distributors, OEM partners who embed Alfresco directly into their products, and technology partners.

Some of the highlighted features of Alfresco are multi-platform support such as Windows, GNU/Linux and Solaris; support to multiple database products such as MySQL, IBM DB2, Microsoft SQL Server (Enterprise Edition), PostgreSQL (community edition), and Oracle Database; Lucene search, activities workflow, a learning object repository, auto-generated XForms with AJAX support, multi-language support, a browser-based GUI that supports Google Chrome, Firefox, and Internet Explorer; desktop integration with Microsoft Office, OpenOffice.org and LibreOffice, as well as pluggable authentication such as NTLM, LDAP, Kerberos, CAS, etc.
