

DVD OF THE MONTH

This month we present the newest version of Mageia 4 and Clonezilla, for you to try out.

Mageia 4:

Mageia was created in 2010 as a fork of Mandriva Linux. Mageia 4 has switched from Gtk+-2 to Gtk+-3. All draktools have been ported from deprecated usemode to polkit. This means you will also see a different authentication dialogue box when starting the tools as a user compared to previous Mageia versions.

Clonezilla live (2.2.1-25):

Clonezilla is a free disaster recovery, disk cloning, disk imaging, and deployment computer program. This release includes major enhancements and bug fixes, and is based on the Debian Sid repository (as of January 13, 2014). The Linux kernel is updated to 3.12.6-2. Partclone was updated to 0.2.69.drb1. Bugs about reiser4 and btrfs have been fixed.
