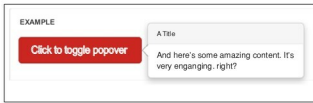

Figure 13: Popover

Figure 14: Alert panel

```
<div id='modalID'>
<div class='modal-content'>
<div class='modal-header'>Title Content</div>
<div class='modal-body'>Body Content</div>
<div class='modal-footer'>Footer Content</div>
</div>
</div>
```

This modal accepts methods like *show*, *toggle* and *hide*. There are options like *keyboard:false* or *true* for toggling the keyboard for the particular modal.

- **Dropdown:** Adds a dropdown functionality to nearly all elements like *navbar*, *tabs* and even to *buttons*.

```
<div class='dropdown'>
<a data-toggle='dropdown'>Drop-
down Triggering element</a>
<ul class='dropdown-menu'>
...</ul>
</div>
```

- **ScrollSpy:** Ever been

confused with the menu item in which you are navigating?

Here is the solution—just integrate the menu with the plug-in and the menu item will be highlighted.

While scrolling down the page, the next menu item gets highlighted automatically.

- **Toggleable tabs:** If you want to show large grouped content on a single page, then here's the solution:

```
<ul class='nav nav-tabs'>List items</ul>
<div class='tab-content'>
<div class='tab-pane'>Pane Content 1</div>
<div class='tab-pane'>Pane Content 2</div>
<div class='tab-pane'>Pane Content 3</div>
</div>
```

- **Tooltips:** Imagine an interactive help text on a Web page. Include this plugin and by hovering on the content, users will get the help text (Figure 12).

```
<div class='tool tip'>
<div class='tin-opener'>ToolTip</div>
<div class='tooltip-arrow'></div>
</div>
```

- **Popover:** If the text to be displayed is too large, toggle on the content and get an overlaying popover housing secondary info.
- By giving options via attributes like *title*, *content*, *delay* and *animation* the popover can be used. It also has methods like *show*, *hide*, *destroy*, etc.
- **Alert:** Add the *dismiss* functionality to all alert messages with this plugin.
- By using this, the alerts can be either invoked or dismissed.
- **Buttons:** Control button states or creates a group of

Table 2: Plug-ins at a glance

Plugin name	.js file used	Access via JavaScript
Transition	transition.js	CSS transition emulator used by other plugins
Modal	Modal.js	\$('#modalID').modal(options/methods/events)
Dropdown	Dropdown.js	\$('#dropDown').dropdown(methods)
ScrollSpy	Scrollspy.js	\$('#body').scrollspy({target:'targetMenuId'}/options/methods/events)
Toggleable tabs	Tab.js	\$('#tabPane tabId').tab(options/methods/events)
Tooltips	Tooltip.js	\$('#elementId').tooltip(options/methods/events)
Popovers	Popover.js	\$('#elementId').popover(options/methods/events)
Alert messages	Alert.js	\$('#alertId').alert(methods/events)
Buttons	Button.js	\$('#buttonId').button(methods)
Collapse	Collapse.js	\$('#collapseDiv').collapse(options/methods/events)
Carousel	Carousel.js	\$('#carouselDiv').carousel(options/methods/events)
Affix	Affix.js	\$('#affixDivId').affix(options)
