

EMBEDDED SPECIALIST

Do you want to help us develop some of the best systems in the world ?

Electrocompaniet is a famous brand which for 40 years has delivered high-end audio systems worldwide. Over the past year we have developed a number of technology platforms for high end audio and video systems, and in 2014 we will launch our new product series: EC living.

The development team at Electrocompaniet works in close cooperation with Kopera development and Westcontrol. Together we form a powerful group of engineers and designers. This group of highly educated engineers covers most disciplines of modern analogue and digital electronics, including design, hardware and software. The combined team is developing numerous products involving a wide range of MCUs, DSPs, ADCs/DACs, analogue circuits, RF electronics and the wide range of products at Electrocompaniet. These products demand both adaptable and specialized software in embedded systems, signal processing, user-interface design/development, and systems and networking. We are seeking specialists in real-time systems, Linux, Android, audio/video processing in a variety of programming languages. We will consider both fulltime employees and experienced contractors.

Join our team of embedded specialists!

Open position at Kopera software in Pune.

As a development engineer in our R&D department you will be working with challenging projects for some of the leading companies for high-end audio and video systems, camera systems, conferencing system, smart house solution and more.

Are you a specialist in one or more of the below technologies?

- Embedded design and development
- ARM-based systems for audio and video processing and presentation
- Analog and digital HW design, RF design, power electronics, EMC, signal integrity
- C, C++, Qt, XML, QML, Python
- ARM, x86, SoC,
- Linux, Android
- Ethernet, WiFi, CAN, Bluetooth, USB, I2S, I2C, SPI, HDMI, S/PDIF
- JIRA, SCRUM, Git, SVN

Kopera Software is owned by Electrocompaniet in Norway, and is part of our international group of R&D centres, located at Tau in Norway, Silicon Valley in the US, and Pune in India. As our employee, you will join a team of very talented engineers working with bleeding edge technologies. You will also have the opportunity to travel to Norway or the US to work side-by-side with other smart, innovative and driven developers to contribute to the success of our winning team as we create the next generation of superlative products for our customers.
