

release-unsigned.apk <alias>

To execute this command, do remember to be in the directory in which your *keyfile.keystore* was located.

- Finally, generate the .apk file

For this, *cd* to the folder in which your Android SDK has been installed. Then *cd* to the *Tools* directory in *Android-SDK* and type the following command:

```
$ ./zipalign -v 4 bin/sketchname-
release-unsigned.apk name.apk
```

Your .apk file will be located in the tools folder as this is the location from which you executed the *zipalign* command.

Wrapping it up

You now have your Android app ready for distribution to the world. In case you want your own icons, create *icon-36.png*, *icon-48.png* and *icon-72.png*. These should be 36×36, 48×48 and 72×72 pixel icons. Place them in the sketch folder (not the data folder or any other sub-folder), and rebuild the app.

Figure 3: Sign the .apk
