

# An Introduction to **GlassFish:** The Enterprise Application Server

GlassFish is the world's first Java EE application server. It is free and open source, being distributed under the Common Development and Distribution (CDDL) as well as GNU Public License (GPL). GlassFish is scalable, has a good performance and can be used in production environments.

**T**his article gives a detailed explanation on how to install and configure the GlassFish application server for the development environment on standalone Red Hat Enterprise Linux Server 6. It also includes important tips on deploying and undeploying sample WAR (Web Archive) for testing purposes and rebuilding GlassFish in critical times.

## Overview

Project GlassFish was started by Sun Microsystems. It supports the Java Enterprise Edition (Java EE) platform. Sun GlassFish Enterprise Server was renamed Oracle GlassFish Server in February 2010 when Oracle Corporation acquired Sun Microsystems.

GlassFish is best for deployments that require the support of the Java platform, Enterprise Edition 5 (Java EE 5), centralised
