

Should You Go In for Digital Repositories or a CMS?

Managing institutional repositories becomes easy with the right tools. This article covers the differences between a Content Management System (CMS) and a Repository Management System (RMS). It then goes on to focus on the DSpace RMS, with a how-to on installing it in Ubuntu.

For the past few years, though there has been a huge feature overlap in institutional repositories and content management systems (CMS), both these systems have differing purposes and features.

Content Management Systems (CMS)

- Here are a few things you should know about content management systems:
- A CMS is the software used to create digital content before it goes for publication
- CMS are oriented towards content creation, production and publication of online media
- CMS enable collaborative creation and modification of content
- They are geared for general usage and can be used for any

general digital content

- They are oriented towards building websites and the creation of content for the Web
- They are tuned to create Web documents
- CMS are generally better for highly dynamic content and living documents
- They are excellent for building websites that are rapidly changing

Open source CMS include Joomla, Drupal, WordPress, Typo3 and Mambo.

Digital repositories

An institutional repository refers to the online archive or library set up for collecting, preserving and disseminating digital copies of the intellectual output of the institution,
