

```
new user dspace)
sudo mkdir /dspace
sudo chown dspace /dspace
Create the PostgreSQL 'dspace' database.
sudo -u dspace createdb -U dspace -E UNICODE dspace
```

Configure Tomcat to know about the DSpace webapps.
[If the following command does not open, check the Tomcat version number and apply it in the command.]

```
sudo gedit /etc/tomcat7/server.xml
```

Insert the following chunk of text just above the closing `</Host>`

```
<!-- Define a new context path for all DSpace web apps -->
<Context path="/xmlui" docBase="/dspace/webapps/xmlui"
allowLinking="true"/>
<Context path="/sword" docBase="/dspace/webapps/sword"
allowLinking="true"/>
<Context path="/oai" docBase="/dspace/webapps/oai"
allowLinking="true"/>
<Context path="/jspui" docBase="/dspace/webapps/jspui"
allowLinking="true"/>
<Context path="/lni" docBase="/dspace/webapps/lni"
allowLinking="true"/>
<Context path="/solr" docBase="/dspace/webapps/solr"
allowLinking="true"/>
```

Save and close the file.

This following step downloads the compressed archive from SourceForge, and unpacks it in your current directory. The `dspace-1.x.x-src-release` directory is typically referred to as `[dspace-src]`. You can also download it directly from the Sourceforge website:

```
sudo mkdir /build
sudo chmod -R 777 /build
cd /build
wget http://downloads.sourceforge.net/project/dspace/
DSpace%20Stable/3.1/dspace-3.1-release.tar.bz2
tar -xvf dspace-3.1-src-release.tar.bz2
```

```
cd /build/dspace-3.1-src-release
mvn -U package
cd dspace/target/dspace-3.1-build
sudo ant fresh_install
```

Fix Tomcat permissions, and restart the Tomcat server:

```
sudo chown tomcat7:tomcat7 /dspace -R
```

Restart Tomcat:

```
/etc/init.d/tomcat7 restart
Make an initial administrator account (an e-person) in
DSpace:
/dspace/bin/dspace create-administrator
```

Test it in the browser.

This is all that is required to install DSpace on Ubuntu. There are two main webapps that provide a similar turnkey repository interface:

```
http://localhost:8080/xmlui
http://localhost:8080/jspui
```

Summary

There are a number of open access repository management products, but DSpace is getting very popular due to the number of features and its excellent performance in terms of compatibility and portability.
