

Speakers @ OSI 2014 share their plans for the event

Jacob Singh Regional Director, Acquia India

Being one of the most recognised open source companies, it is important that we come and extend support to you and contribute to the ecosystem. It is also an opportunity to interact with the people in the same field, learn from them, build new relations and try to make money out of open source. This time we plan to talk about personalisation, customising content on websites depending upon the visitors, and a lot more! I think the event last time was a little dry in terms of the business audience. And I think I would want to get rid of the 'gold', 'platinum' criteria for passes. Regarding the rest, the event is always a treat!

Dibya Prakash Consultant, ECDzone

I have been associated with OSI since the event was called LinuxAsia, and one of the major reasons for this is that it is a combination of technology and business. It drives business and technology together. We plan to speak on mobility, and we also have plans to conduct a workshop on mobile development. We are going to deliver a talk/ session on mobile testing and the job opportunities in this space. This event has been growing pretty well.

**Prajod Vettiyattil** Architect, Wipro Technologies

I have been working with the open source division of Wipro for four years, and I have been a speaker at OSI in 2011. The reason for my association is the wide variety of interesting tracks, the dedicated audience and the networking possibilities. Open source is a very big ocean and events like these are always a treat to attend. I plan to speak on Big Data, Hadoop and ApacheSpark. I am looking forward to this event.

Mubeen Jukaku Technical Head, Emertxe

Ours is a company based on open source software and we operate in that domain. OSI, being the largest conference on open source, brings us here. We are passionate about contributing our content to this conference as there will be IT implementers, developers, etc. This event will give us an opportunity to share our experiences among the attendees. We have planned to speak on Linux device drivers.

**Piyush Mathur** Senior Solutions Advisor, Zimbra

We have been associated with Open Source India, as Zimbra is an open source-based company. Our primary expectations from this event are a lot of coverage and to get some leads. Ours is a product company and we have three open source-based products to sell in the market. Among other topics, we are speaking on the Zimbra collaboration.

Zimbra is an open source product. At this event, we expect customers and prospects who are interested in open source technology, and who evangelise open source as a technology. We are sure we will find the right set of people in this event.
