

our device, out-of-the-box, but you can still get any of your favourite Android-based applications on a Jolla smartphone.

Q How would one run an Android application on a Jolla smartphone?

We have several Android app stores, which can be accessed from the Jolla store that is pre-installed on the device. You can download the official versions of your favourite apps via this app store. Precisely what it means is that you can run any Android application on the Jolla operating system. The other thing about an 'ecosystem' is that our software does run on pretty much any Android device. So, when we go and talk to a hardware partner, we walk in the door with our operating system running on their hardware. This is just a starting point. Due to this attribute of the Jolla OS, our discussions with hardware partners are on a pretty aggressive level. There isn't anything to announce yet, but there will soon be other devices running the Sailfish OS system in the near future.

Q In what ways is the Sailfish OS better than Android?

We pledge not to sell users' private data, which is the most important thing. Android was designed to take users' data and turn that into something that the company can make money with.

According to certain studies, typical users pick up their phone about 200 times a day. So, in such a scenario, multi-tasking is extremely important. Multi-tasking means the ability to see everything on the screen that is important to you and, hopefully, be able to react to those notifications. You only need one processor core in order to read your email, text messages and do all such things. With our phone's two cores, you can run lots of applications at the same time and leave them all open.

The other thing is that Jolla smartphones allow one-handed usage. People generally use both hands on their devices, even while walking, but with Jolla, you can do everything that you need to do with just one hand. So if you have the other hand holding on to a bus railing or carrying a bag, you can easily operate your Jolla smartphone.

So these three things—privacy, a great UI for multi-tasking and one-handed usage keep Jolla ahead and different from Android.

Q So why would someone who is very accustomed to using Android switch to Jolla?

Every time you pick up a phone, there are a lot of things you do. One example is sending a text message. Try doing that with your phone and observe how many times you have to actually touch the device; how many times you have to look at it, and mess with it to be able to do what really should be effortless. So you spend a tremendous amount of time with your device everyday, but does this give you the best experience, or do you feel like you have to do a lot of different things to get the most of every action you do, on a daily basis? For us, it is about providing the fastest and the easiest ways to control and handle your digital life. That is one of the most compelling aspects of a Jolla smartphone. The user experience in an Android device is five years old and it hasn't changed much over

Specifications of the Jolla smartphone	
Dimensions and weight	Height: 131 mm Width: 68 mm Thickness: 9.9 mm Weight: 141 g
Processor	Qualcomm Dual Core 1.4GHz
Network and connectivity	GSM: 850/900/1800/1900MHz WCDMA: 900/2100MHz (Bands 1/8) 4G LTE 800/1800/2600MHz (Bands 3/7/20)* WLAN802.11 b/g/n 2.4GHz Bluetooth 4.0 EDR HS AGPS and GLONASS USB 2.0 HS Standard 3.5 mm 4-pin audio jack Micro SIM Standard MicroUSB connectivity and charging Extension interfaces for wireless NFC, power in/out and I2C data connectivity
Memory	16GB storage 1GB RAM MicroSD slot
Display	Ample 11.43 cm IPS qHD (960x540) display 5-point multi-touch with Gorilla 2 glass
Camera	8MP AF camera with LED flash 2MP front-facing camera
Sensors	Proximity Accelerometer Gyro E-compass Ambient light
Power	Approximate talk and standby time: 9-10 hrs (GSM/3G) and 500 hrs User-replaceable battery (2100mAh, 3.8V, 7.98Wh)
<i>* LTE wireless service may not be available even if listed bands are supported by your carrier.</i>	

that period, while we offer something that is much faster. It is much more efficient, much easier to use and much more powerful.

Q Which current operating system do you look up to when adding features in Jolla?

It's interesting, but I think the others have taken a lot from us. At the moment, we are primarily working with our customers and our consumers in order to continue to deliver things that they want. So we design this in the beginning for ourselves, and then we take feedback from our customers and even potential customers and continue to deliver new things for them. I don't understand why people refrain from trying out something new, particularly in the smartphone space. If we just had Chevrolet and Toyota, would that be enough? We offer something new and fresh, and a lot of people really love it.
