Open ear headphones— a great companion for active individuals

Panasonic Consumer Electronics Company has launched RP-HGS10 open ear headphones, which are ideal for those who want to listen to music while still being aware of what is going on. The headphones sit directly in front of a user's ear to provide sound transmission via advanced bone conduction technology, by which vibrations move through the bone directly into the auditory nerve, producing clear sound without blocking the ear canal. This is especially useful for those who enjoy outdoor activities like hiking, running or biking. They can hear requests to move over or hear traffic sounds when on a busy path.

The simple, streamlined design of the RP-HGS10 open ear headphones is lightweight, allowing them to comfortably sit outside a user's ear and wrap around the back of the head to securely stay in place. They have also been designed with soft cushioning material to absorb vertical vibration above the ear while a user is running or jogging; a sweat and water-resistant design makes the headphones perfect for workouts. The headphones are available in a variety of colours like green and black, purple and pink, and white and black, each featuring a coloured reflection sheet for additional safety during night time outdoor use.

Netgear's new AC dual-band Gigabit Wi-Fi range extender

Netgear has announced the availability of a new Wi-Fi range extender called NETGEAR AC750 (EX6100), which supports older a/b/g/n Wi-Fi devices while providing additional performance to the latest 802.11ac Wi-Fi devices. It delivers AC dual band Wi-Fi up to 750 Mbps and works with any standard Wi-Fi router being ideal for HD video streaming and gaming. It also gets connected with iPads, smartphones and laptops. It is outfitted with dual external antennae to boost range and improve Wi-Fi speeds. It is easy to install and can be plugged into any electrical outlet. Smart LED indicator lights on the front of the extender guide users to select an optimal location for best Wi-Fi coverage.

In addition to extending a home network, one can also use the extender as an access point by creating a new Wi-Fi hotspot when a wired Internet connection is plugged in.

iBall launches Enigma – the selfie phone!

After understanding the present day user's need to take perfect selfies, iBall has launched a phone that does just that. The new phone, called Enigma, is easy to hold while taking selfies, does not blur images and gives great pictures in terms of sharpness even while taking group selfies. It has an 11.43 cm (4.5 inch) qHD IPS bright display, 1GB RAM, 8GB internal storage (further expandable up to 32GB), the latest Android 4.4 Kitkat OS, and a powerful 1.3GHz quad core processor.

It fits in the frame and has the gesture recognition feature. The NFC (near field communication) feature lets you attach a pen drive and copy pictures, or share yours with others easily. The phone is preloaded with 15 regional languages and 22 international languages, and has a multi-lingual keyboard.
