

DVD OF THE MONTH

Power up your old hardware with these lightweight Linux-based operating systems.

Puppy Linux 5.7 'Slacko': This is a lightweight Linux distribution that focuses on ease of use and a minimal memory footprint. Puppy Linux can be easily installed on different media, and can be used on any older and lower end hardware. The distribution was originally developed by Barry Kauler and other members of the community, and comes with applications such as AbiWord (a word processor), Gnumeric (for spreadsheets) and MPlayer (a multimedia player).

LXLE: This is an easy-to-use lightweight Linux desktop distribution based on Ubuntu and comes with the LXDE desktop environment. This full-featured OS for an aging PC is light on resources and heavy on functions. The bundled image of the distro comes with the latest stable versions of major software. The ISO image can be found on the root of the DVD in the other_isos folder.

Gentoo Linux 20140826: This is a versatile, fast and completely free live DVD featuring several desktop environments and many popular up-to-date applications. This is a special flavour of Linux that can be automatically optimised and customised for just about any application or need. It comes with an advanced package management system called Portage.
