

```

>>> 14 + 20
r(0) = 32
>>> windows = global.get_window_actors()
r(1) =
>>> windows.forEach(function (w) { w.set_scale(0.0, 0.0) })
r(2) = undefined
>>> windows.forEach(function (w) { w.set_scale(1, 1) })
r(3) = undefined
  
```

Figure 1: Looking glass

used by JHBuild, use the `run` command:

```
jhbuild run program
```

To start a shell with the same environment used by JHBuild, use the `shell` command:

```
jhbuild shell
```

Looking Glass (lg): A developer tool

Looking Glass (lg) is GNOME Shell's integrated inspector tool and JavaScript console, which is useful for debugging. To access *looking glass*, type `lg` in the `Alt+F2` prompt. To exit

from this, you can just press the `Esc` key.

Looking Glass has four major panes (Evaluator, Windows, Errors and Extensions) and one tool (the Picker).

Evaluator: This is an interactive JavaScript prompt. You can type arbitrary JavaScript at the prompt, and it will be evaluated. Try, in order:

```

1+1
global.get_window_actors( )
global.get_window_actors( ).forEach(function
(w) {Tweeners.addTween(w, {time:3, transition:
'easeOutQuad', scale_x: 0.3, scale_y: 0.3 } ) } )
global.get_window_actors( ).forEach(function (w) {w.set_
scale(1, 1) } )
global.get_window_actor( ) [0]
it.scale_x
  
```

Special Evaluator features: This last bit deserves more explanation. One thing about the Evaluator that's different from, say, Python's default interactive prompt is that each computed value is saved, by default, and can be referred back to. Typing `'r (number)'` will get you back the result with that number, and it is the last result.

The evaluator also has a history feature; you can press `Up` and `Down` to access previously used entries. The history

We Value Your Feedback

We love to hear from you
as **OSFY** consistently
strives to make
its content **informative,**
interesting and
engaging.
