

PHP-based open source frameworks

- Laravel
- Phalcon
- Symfony
- CodeIgniter
- Prado
- Seagull
- Yii
- CakePHP

Digital repositories

An institutional repository refers to the online archive or library for collecting, preserving and disseminating digital copies of the intellectual output of the institution, particularly in the field of research.

For any academic institution like a university, it also includes digital content such as academic journal articles. It covers both pre-prints and post-prints, articles undergoing peer review, as well as digital versions of theses and dissertations. It even includes some other digital assets

PHP-based open source CMSs

- Joomla
- Drupal
- WordPress
- Typo3
- Mambo

generated in an institution such as administrative documents, course notes or learning objectives. Depositing material in an institutional repository is sometimes mandated by some institutions.

Joomla CMS

Joomla is an award-winning open source CMS written in PHP. It enables the building of websites and powerful online applications. Many aspects, including its user-friendliness and extensible nature, makes Joomla the most popular Web-based software development CMS. Joomla is built on the model-view-controller (MVC) Web application framework, which can be used independent of the CMS.

Joomla CMS can store data in a MySQL, MS SQL or PostgreSQL database, and includes features like page caching, RSS feeds, printable versions of pages, news flashes, blogs, polls, search and support for language internationalisation.

According to reports by Market Wire, New York, as of February 2014, Joomla has been downloaded over 50 million times. Over 7,700 free and commercial extensions are available from the official Joomla Extension Directory and more are available from other sources. It is supposedly the second most used CMS on the Internet after WordPress. Many websites provide information on installing and maintaining Joomla sites.

Joomla is used across the globe to power websites of all types and sizes:

- Corporate websites or portals
- Corporate intranets and extranets
- Online magazines, newspapers and publications
- E-commerce and online reservation sites

Figure 1: Joomla extensions

- Sites offering government applications
- Websites of small businesses and NGOs
- Community-based portals
- School and church websites
- Personal or family home pages
- Joomla's user base includes:
 - The military - <http://www.militaryadvice.org/>
 - US Army Corps of Engineers - Country: <http://www.spl.usace.army.mil/cms/index.php>
 - MTV Networks Quizilla (social networking) - <http://www.quizilla.com>
 - New Hampshire National Guard - <https://www.nh.ngb.army.mil/>
 - United Nations Regional Information Centre - <http://www.unric.org>
 - IHOP (a restaurant chain) - <http://www.ihop.com>
 - Harvard University - <http://gsas.harvard.edu>
 - ... and many others

The essential features of Joomla are:

- User management
- Media manager
- Language manager
- Banner management
- Contact management
- Polls
- Search
- Web link management
- Content management
- Syndication and newsfeed management
- Menu manager
- Template management
- Integrated help system
- System features
- Web services
- Powerful extensibility

Joomla extensions

Joomla extensions are used to extend the functionality of Joomla-based Web applications. The Joomla extensions for multiple categories and services can be downloaded from <http://extensions.joomla.org>.
