SISA Information Security | Bengaluru, India

The company's services are spread across three verticals—consulting, training and software products, and are currently being offered to over 300 organisations spread across 30 countries. SISA is India's first PCI QSA organisation, and continues to pioneer and lead the security industry within this sector. SISA's services within the PCI sector include PCI DSS validation, PA QSA validation, PCI ASV scanning, etc. SISA also provides technical security services such as the application pen test and code review, network VA, penetration testing and forensics.

Major open source-based offerings: SMART-RA is a free formal risk assessment tool, wholly developed by SISA. The tool helps organisations reduce expenditure on information security risk assessments by up to 60 per cent. The tool can be accessed at www.smart-ra.com.

Leading clients: SISA has clients across various sectors such as airlines, banking, retail, IT and ITES, e-commerce, etc. Some big names include IBM, Wipro, Infosys, Vodafone, Bookmyshow, Flipkart, Snapdeal, Yatra.com, Bank of India, HDFC Bank, Bank of Baroda, Qatar Airways, Abu Dhabi Commercial Bank, etc.

USP: SISA is known amongst its clients for efficient solutions that surpass compliance criteria, and reach for the larger goal of security. This service philosophy is entrenched in SISA's motto, 'Security and not just Compliance'.

Special mention: SISA Information Security has recently featured in 'NASSCOM's Emerge 50 Companies for 2012' under the growth category.

Unmukti Technology | Gurgaon, India

The company offers Hopbox (<http://hopbox.in>), a pay-for-use network security service, managed and monitored by experts with a mission to provide enterprise-grade, affordable network security to companies, irrespective of their size. The company doesn't sell appliances; instead, it aims for an all-inclusive approach to provide services to customers at the middle and lower end of the spectrum.

Major open source-based offerings: Being an open source shop, the company has been able to use existing robust tools to create a scalable platform that quickly responds to customer requirements even as it keeps adding new features. The entire platform has been built exclusively using open source components. The on-premise appliance has a FreeBSD kernel core with PF, Snort, OpenVPN, Racoon, etc. The cloud component utilises Debian GNU/Linux with Squid, ClamAV, C-ICAP, MySQL and MongoDB.

Leading clients: V-Mart Retail Ltd (at more than 60 locations), Resurgent India Ltd (a boutique investment bank), Ginni Systems Ltd (software), DesFab Engineers & Builders (manufacturing), Mukesh Raj & Co Chartered Accountants (accounting), Stones2Milestones Education, etc.

USP: As a pay-for-use, completely managed service offering, Hopbox reduces the TCO (Total Cost of Ownership) for enterprise grade network security. Proactive monitoring by experts and real-time responses to emergent threats create a continuously evolving network security environment. A cloud-based 'Policy & Malware Filtering Engine' ensures that data leak and Web usage policies are applied and Web-based threats are thwarted. The 'Real Time Analytics Engine' helps clients understand what is happening in their networks and provides actionable insights on network status, emerging threats, employee Web usage and policy effectiveness.

Special mention: Invited exhibitors at Nullcon Delhi 2012, an international security conference and exhibition.
