Ajay Songare:

Which is the best open source network analysis tool?

[Like](#) [comment](#)

Irfan Naseef P: What do you mean by analysis ?

To explore your network, NMAP will help. To monitor, NAGIOS will help. To sniff, try Wireshark.

Jatin Khatri: NMAP.

omps NMAP.

Karthigeyan Kith:

Is Ubuntu virus free OS ?

[Like](#) [comment](#)

Shubham Verlekar: Yes, Kith it is completely virus free.

Irfan Naseef P: All linux flavours are virus free. It's the power of the Linux kernel.

Abdul Shukoor:

Hi, please help. If I install Windows on a system that already has a Linux OS, then Linux boots for a longer time. Can anyone tell me the reason and solution of this problem?

[Like](#) [comment](#)

Shivam Gupta: Hi friend ! First you need to understand why this has happened. If you are working on a linux based distro then your boot loader is GRUB (mainly) and if you are using windows NTLDR is the boot loader. GRUB is a multiple kernel supporter and supports both windows and linux and NTLDR is a single kernel supporter. So, if a machine is already having a linux, it has a GRUB loader and when you install Windows the NTLDR replaces the GRUB and then only one kernel can be supported that is of Windows. Coming to the solution, first, you need to understand how to do the entry in GRUB. There are many software available which enables you to do this work. One of which is GRUB ENCHANCER. Or after installing windows, you can use EASY BCD SOFTWARE to bring back linux distro. Hope I have been able to help you. .

Abdul Shukoor: Thanks a lot for the help!

SA Suneesh:

When I tried to install ubuntu ultimate edition 3.4 on my Lenovo laptop, it is failed and seems that grub installation failed. What should I do?

[Like](#) [comment](#)

Shivam Gupta: Either your setup is corrupted or you are installing OS in a logical partition rather than primary partition.

Liesa Chiun Chun:

And how to make security in Linux? Please help.

[Like](#) [comment](#)

Daniel Ribeiro: Depends on your distro. If you are using an ubuntu-based distro, here you have what I do:

1st - Configure your ufw: <https://help.ubuntu.com/community/UFW>

2nd - Install rootkit hunter and use it regularly if you install packages out of the official repositories.

Isah Salim:

Hey Ubuntu fans! I lost my root password and now I'm trying to use another account. I'm trying to use to access root privileges but I can't use sudo because this account does not belong to any group. Any suggestions?

[Like](#) [comment](#)

Damanjeet Singh: Change the run level and reset the password.

Isah Salim: How? Can you please show me step by step?

Swapnil Jain: For step by step process, check: www.techpage3.com/2012/08/recover-lost-root-password-in-ubuntu.html.

Jatin Khatri: It's here <http://askubuntu.com/questions/121698/how-do-i-reset-a-lost-password-using-recovery-mode-requires-me-to-type-the-pass>.

Stv Spider Sikaahua: -root /get passwd directory - "isah zee"- Hope this will help you retrieve your lost password.

Tulsi Raj: Reboot system and enter the shift menu then go recovery mode enter root and change the password.
