

CASUAL. If it is deployed correctly, users can simply connect an Android smartphone with a known exploit to a system running CASUAL. The exploits will take place on their own then. Outler has made a headless box, which allows users to simply plug-in their devices for rooting.

The box he has created is based on a Raspberry Pi computer with an Arduino battery. This makes the device extremely portable. The box comes fitted with five LEDs and a toggle switch, which are used to communicate with the user. As soon as you connect a phone to the device, the LEDs will indicate the act and finally a 'pass' or 'fail' LED will glow to tell you what happened to the process.

According to Outler, the success rate of the device is around 70 per cent. The exploits loaded in the box are capable of handling around all the standard Android firmware versions. Since it is open, anyone can contribute to CASUAL if they find a new exploit. Outler said that anyone can build such a device simply by using a headless mode designed for embedded devices, like the Raspberry Pi.

Adieu Ubuntu Linux 11.04!

If you are a user of Ubuntu Linux 11.04 (Natty Narwhal), it's time to switch over to something more exciting! Packed with new features, Canonical has released Ubuntu Linux 12.10 or Quantal Quetzal and announced the end of Natty Narwhal.

The company has asked users of Ubuntu 11.04 to upgrade in a stepwise manner by first moving to Ubuntu 11.10 (Oneiric Ocelot). The instructions are available on the Ubuntu site.

Kate Stewart, Ubuntu release manager, said that Ubuntu 11.10 and Ubuntu 12.04 (Precise Pangolin)—the next step along the way—are still actively supported with security updates and select high-impact bug fixes.

Raspberry Pi gets more teeth with RISC OS

Now you can run Linux-based \$25 Raspberry Pi minicomputer with the RISC OS. The operating system has been named RISC OS Pi. This is the first 'official' release of RISC OS exclusively meant for the Raspberry Pi. The operating system is made to be programmed onto an SD card with a storage capacity of 2 GB or more and can be downloaded free from the Raspberry Pi download site, as an SD card image or as a torrent. Interested users can also buy a specially-branded programmed SD card from RISC OS Open. RISC OS Open Limited (ROOL) manages the source code for RISC OS.

RISC OS is a computer operating system designed in Cambridge, England

RHCA

(Red Hat Certified Architect)

ASSURED Exam Dates @ IPSR

Confirmed RHCA Exam Dates for November

2nd 12th, 19th & 24th

redhat
TRAINING PARTNER

Produced the Highest number of Red Hat professionals in the World

RHCA RHCDs RHCSs RHCVA RHCE

Modules Starting Every Week

IPSR, The Best in Red Hat Certifications

Awards

- ▶ Winner of Red Hat Asia Pacific International Award 2008, 2009, 2010 & 2011
- ▶ Winner of Red Hat GLS National Awards 2004, 05, 06, 07 & 08

Faculty & Infrastructure

- ▶ 27 member faculty crew led by RHCE, RHCVA, RHCSs, RHCDs certified professionals
- ▶ Global standard infrastructure offered at our International Centre located in Kochi

Achievements

- ▶ Produced 5000+ Red Hat professionals
