Google Maps. Sports tracker also splits the whole tracking session into laps. Listing the fastest and the slowest, with details such as lap time, speed, and distance. The app has a cool chart section that shows your workout statistics such as speed/altitude vs distance, and lets you monitor your highs and lows during certain points in the workout. If you have an additional heart-rate belt, you can pair up the belt with the app, and it will monitor and list details in an elegant manner, allowing you to improve your heart rate by varying your workout.

Though Sports-Tracker offers its own recommended heart belt (available from the website) that works with almost all platforms, you can pair up any supported Bluetooth heart belt.

Once you have finished your workout, if you want, you can share it with a mere press of a button—even with popular social sites such as Twitter and Facebook. The icing on the cake is the website, which shows all your hard work, stats and routes for a more detailed and precise look at your workout. The website is currently built using Flash; however, developers will roll out a spanking new HTML5-based website soon, along with a revamped version for Android.

The best part of Sports-Tracker is that it's available for free, with no hidden costs or features being cut. All the mentioned features are free, and can be used without even creating an account... Awesome!

VirtuaGym—A virtual indoor/gym class trainer

Exercise without following the proper methods and training can lead to disproportionate muscle gain and even injury. To reduce such risks, you can join gym classes or even hire trainers—but not all of us can afford these luxuries. VirtuaGym is an Android app that lets you track most indoor exercise to see it's done properly. The app comes preloaded with boatloads of workouts; if you're not satisfied with these, download some from the Net, or upgrade to a Pro account for full access.

Unlike the Sports-Tracker interface, which is outstanding, the VirtuaGym interface is simple, hassle-free, and with nothing fancy. The home screen has only two options, *Exercise* and *Progress*. The first opens up the calendar, where you can add workout sessions, or the specific exercise you
