

needs a 'Yes' or 'No' response. You can create a dialogue box as follows. First, create a button that will display a dialogue box when clicked:

```
<div data-role="page">
  <a href="#confirm" data-role="button" data-rel="dialog"> Open
  Dialog</a>
</div>
```

Next, create the dialogue page that will be displayed on clicking the *Open Dialog* button:

```
<div data-role="page" id="confirm" class="ui-dialog-contain">
  <div data-role="header">
    <h2>Confirm</h2>
  </div>
  <div data-role="content"> Do you want to continue?</div>
  <a href="index.html" data-role="button" data-inline="true">Yes
  </a>
  <a href="#" data-role="button" data-inline="true" data-theme="a"
  > No </a>
</div>
```

Note: The *href* element in the button page, and the *id* in the dialogue page must be the same—i.e., in the above template, I have given ** and in the dialogue page *id="confirm"*.

To close the dialogue or go back, you can use *"#"* as an href attribute, and can use *data-rel="back"*.

To set the dialogue box's width, margins and padding, use a class named *ui-dialog-contain* and give the specifications in a style tag as follows:

```
<div data-role="page" id="confirm" class="ui-dialog-contain">
  .ui-dialog-contain {
    width: 50%;
    max-width: 500px;
    margin: 10% auto 15px auto;
    padding: 0;
    position: relative;
    top: -15px;
  }
</div> // You can change the width and margins accordingly.
```

A dialogue box demonstrating all the above is presented in Figure 4.

Pop-ups: There are a lot of pop-ups that you can include to make your application more interactive.

Let us look at a very basic pop-up tool-tip (the following code will show a very basic pop-up, as in Figure 5):

```
<a href="#popup" data-rel="popup">Tooltip</a>
<div data-role="popup" id="popup">
```

Figure 4: Dialogue

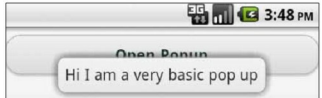

Figure 5: Pop-up

Figure 6: Menu pop-up

```
Hi, I am Tooltip.
</div>
```

There are many more pop-up types like *Menu*, *Image*, etc. We will discuss some of them in the following part of this article. I personally like this part, so please read it carefully!

Menu pop-up: For this, add the code below in a script tag:

```
$.mobile.changePage('#dialogpage, 'popup', true, true);
```

And this code is needed in the page:

```
<div data-role="dialog" id="dialog1">
  <div data-role="header" data-position="fixed">
    <h2>Subscribe</h2>
  </div>
  <div data-role="content" data-theme="c">
    <div data-role="fieldcontain">
      <fieldset data-role="controlgroup">
        <input type="radio" name="radio1"
        id="open" value="Open Source" checked="checked" />
        <label for="open">Open Source For You</
        label>
```
