

Welcome Guest			
Home	Products	Services	Contact...

Figure 8: Basic nav-bar

```
<div data-role="navbar">
  <ul><li><a href="index1.html" class="ui-btn-active ui-
state-persist">Tab 1</a></li>
  <li><a href="index2.html">Tab 2</a></li></ul>
</div>
```

Nav-bars with headers: To use nav-bars with a title or header bar, use the commands shown below:

```
<div data-role="header"> <h1>Welcome Guest</h1>
<div data-role="navbar">
  <ul>
    <li><a href="#"> Home</a></li>
    <li><a href="#">Products</a></li>
    <li><a href="#">Services</a></li>
    <li><a href="#">Contact Us</a></li>
  </ul>
</div>
</div>
```

Icons in nav-bars: You can also use icons with the nav-bar items—e.g., different icons for *Home* and for *Contact Us*. Similarly, *data-role="icon"* can be used to include icons; and to give the icon a specific position, use *data-iconpos="top"*.

Fixed footbars: For a tool-bar that remains fixed as a footer, use the *"fixedtoolbar"* plug-in. It can be fixed to the top or bottom of the viewport, even when the page content is being scrolled in between. To enable this, use *data-position="fixed"* as shown:

```
<div data-role="Footer" data-position="fixed">
  <h1>Fixed Footer</h1>
</div>
```

Full-screen tool-bar: These tool-bars fill the entire screen with content—such as a photo viewer, when you want to fill the entire screen with a picture. To enable this, use the option *data-fullscreen="true"* in the div tag.

Page transitions: As of now, we have worked on page navigation using tool-bars—but in today's creative world, users want to navigate pages with beautiful transition effects, which can result in an amazing user experience. jQuery Mobile has the perfect solution -- page transitions. The framework includes a set of CSS-based transition effects like *flip*, *pop*, *fade*, *turn*, *slide*, etc, that can be applied to any
