Praveen Singh Yadav:

How to cancel print job in Linux?

Like · comment

Aboobacker Mk: Refer to this link.

<http://www.linuxforums.org/forum/mandriva-linux/24221-killing-print-jobs.html>

Kousik Mandal:

I have a small computer network (10 computer connected). I want to install server on one computer and the computer configuration are AMD64 ,1GB DDRIII RAM. How can I install & configure the server into my network. I have the Ubuntu server but the DVD does not display the graphical mode at the time of install . I installed it but the graphics mode not coming. Please help me.

Like · comment

Aboobacker Mk: Ubuntu server does not have GUI by default. To install GUI, type `sudo apt-get install ubuntu-desktop` ins hell.

Ross James Rowlinson:

I got Ubuntu on me Netbook I hardly use the Netbook but want to get rid of Windows . It only gives me the option of dual boot. How do I get rid of Windows totally?

Pranav Garg: Install `gparted`. `sudo apt-get install gparted`. Delete the Windows partition and extend the Ubuntu one.?

Ankur Agrawal:

I have configured IP settings on Ubuntu 10.0.4 TLS but I am unable to access the internet. Can somebody help me?

Like · comment

Raghava Karthik Reddy: Did you configure DHCP settings?

Ankur Agrawal: I am unaware of it. Please guide and thanks for the reply. Earlier I was using the same internet connection on Windows and it was working fine. I never entered DHCP settings there.

Raghava Karthik Reddy: Can you access internet through Windows(if you are using)? Does your Windows system directly connects to the internet or do you have to manually configure it?

Princess Soumya Singh Sisodia:

How should I install Ubuntu on Windows ?? Please tell me the whole process. I have Ubuntu 11.04.

Like · comment

Shivam Gupta: Soumya you might have the DVD of Ubuntu. Restart your terminal. Insert Ubuntu DVD and it would start. Else, you need to select the option from the 'boot device priority' option from 'bios'. It would show two options:

1. 'Try Ubuntu without installing.' This option lets you to use or simply taste Ubuntu without installing on your hard disk.
2. 'Install Ubuntu'. We would probably love to choose this option.

Next, you need to select your keyboard and language part, and by default it detects itself. Next, the most important part. Select on which partition you need to install Ubuntu. Caution: The partition you would select would get formatted. But if you want to run with Windows 7 and you are not sure about the partition, select the first option stating, 'Install Ubuntu side by side with Windows'. Next, it would simply ask for your password, date, network, time zone, etc. Select the appropriate details. Finally Ubuntu would start installing. And at last, it would reboot and ask for the dvd removal. Remove dvd and restart. Enter username and password and you u might love to have full-access control of Ubuntu. Right click on desktop, open the terminal and type "`sudo -i`". You would get the root acc. Type "`passwd`" command and enter new password. Restart machine again. You would be asked to choose the operating system. Select Ubuntu 11.04 for desktop ubuntu. Select ubuntu recovery when you need to do trouble shooting.

Shivam Rohilla: You can also extract the iso and double click on wubi. It will automatically install Ubuntu on Windows 7. You can also remove that ubuntu if you want via add/remove program option.

K Kt Kittu: Yes, Shivam Gupta, you are right. I would like to tell you that we can also go for slice partition!

Saravana Kumar: You can install any virtual machine in Windows -Vmware, Oracle and then inside virtual machine you can install Ubuntu .

Shivam Gupta: Thanks Kittu, we could use that point.
