

means users can also test Intel's Medfield-based smartphones.

And did we forget to mention its user interface? Well, it has been given a 2012-esque styling and it's worth mentioning here that it is surely one of the prettiest benchmarking tools available on Android.

According to sources, Vellamo 2.0 also features an 'inline video' test; it installs a Web server on the device to stream a file with artificial network latency imposed to simulate Wi-Fi, 3G and 4G connections.

The first alpha of Mandriva Linux 2012 is out

The first alpha for Mandriva Linux 2012 is finally available now for testing. Code-named Tenacious Underdog, this version upgrades the KDE desktop to version 4.9.0 from August and includes a faster distribution installer. Also, the text mode of the installer is working fine. The HAL (hardware abstraction layer) has been completely removed. Several bug fixes and other packages have been updated.

Mandriva Linux project leader Per Oyvind Karlsen stated that the alpha got delayed due to some issues in the current build system.

Python 3.3 released

Python lovers now have a reason to smile. The version 3.0.3 of the Python language has been released. This brings in new syntax to the language in the form of 'yield from' allowing developers to delegate work to a sub-generator (PEP 380). Among several other changes, Python 2 style Unicode literal syntax for strings is back and is now capable of making more code from Python 2.

Among the library changes, the fault-handler that helps debugging low-level crashes has been added along with the IP address, which is required for high-level objects representing IP addresses and masks. Other additions are lzma, to compress data using the XZ/LZMA algorithm; unittest.mock to replace parts of your system under test with mock objects; and venv for Python virtual environments.

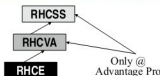

Improvements have been made to the namespace packaging (PEP 420); there's a new memory view implementation that improves reliability, a new Python launcher for Windows (PEP 397, documentation), and qualified name support for functions and classes ensuring easier management of nested classes (PEP 3155). There is also a C accelerator for faster decimal arithmetic.

Now, LPI's Linux Essentials in North America

During the LinuxFest 2012 in Columbus, Ohio, the Linux Professional Institute (LPI), the world's premier Linux certification organisation, announced that LPI's Linux Essentials programme that measures foundational
