Themes and plug-ins for Octopress

Octopress is easy to customise with themes. A list of the popular options can be found at the project's GitHub wiki: <https://github.com/imathis/octopress/wiki/List-Of-Octopress-Themes>. Let's say you like one of the available themes called DarkStripes, and want to install it. The installation is as simple as issuing the following code:

```
cd octopress
git clone git://github.com/amelandri/darkstripes.git .themes/
darkstripes
rake install['darkstripes']
rake generate
```

Octopress also has lots of plug-ins, and ships with the ones that are most commonly used. The entire list can be found at <http://octopress.org/docs/plugins>. The Gist Tag plug-in is quite commonly used. With this plug-in, sharing a GitHub gist is as simple as:

```
{% gist 3549411 %} #where 3549411 is the gist id
```

What lies ahead

Octopress is powerful and customisable to a great extent. In this introduction, we have barely scratched the surface. The entire reference documentation for Octopress can be found at: <http://octopress.org/>. Brandon Mathis, the creator of Octopress, has his own blog at <http://brandonmathis.com/>, which is a great example of a completely customised Octopress instance. Hope to see more and more hackers blogging with Octopress and having a lot of fun with it!
