

In India, Acquia has partnered with Srijan and Azri Solutions to offer its services, including Drupal training.

Puppy Linux 5.2 'Wary' out!

The Puppy Linux development team has released version 5.2 of the 'Wary' edition. Puppy Linux is a popular small release that can run entirely from RAM and its primary focus is ease-of-use. The new version, based on the 2.6.32.45 Linux kernel, is claimed to be a 'massive upgrade' from the 5.1.x series. Users can now easily upgrade from Xorg 7.3 (which is still included by default to support older hardware) to version 7.6 for newer video devices by installing a single PET (Puppy's Extra Treats) package.

Google kills Code Search

Google has done a lot of good for the developers' community but dumping Code Search is one act that has created concern in the open source community. After five years of great service, Google is closing Code Search. According to an announcement made on the company's official blog, "Code Search, which was designed to help people search for open source code all over the Web, will be shut down, along with the Code Search API on 15 January 2012."

Cadillac to have Linux-based CUE systems

Cadillac has announced a Linux-based in-vehicle infotainment (IVI) and navigation system that will appear for the very first time in the 2012 Cadillac XTS. The Cadillac User Experience (CUE) system's triple-core ARM11 processor controls both a capacitive multi-touch main touch-screen and an optional cluster display. It features proximity sensing, haptic feedback, natural-language voice recognition, and an open app development platform. The company began development of CUE in 2008.

Track potholes in Mumbai with Android phones

If you live in Mumbai and own an Android phone, you can be a great help to the Brihanmumbai Municipal Corporation (BMC). Mumbaikars owning Android phones will be able to upload photos of potholes and report them to the civic officials on a real-time basis. BMC is procuring software for a whopping amount of Rs 60 lakh to track potholes. Being available only for Android devices, though, restricts the use of the platform to a limited audience.

Thousands of WordPress blogs hijacked!

A recent report from anti-virus firm Avast says that cyber criminals have hijacked thousands of WordPress blogs to deploy malicious code. According

Now, a chocolate-shaped smartphone!

The latest smartphone from Japan-based NTT DoCoMo resembles a bar of chocolate. Accessory brand Q-Pot, which has been inspired by cakes, sweets and bright colours, has been working with

DoCoMo to release the Q-Pot Phone SH04D. The smartphone will be just 6 cm wide, smaller than most of DoCoMo's standard smart-phone models. It will run Google's Android 2.3 operating system. To increase the desirability of the phone, only 30,000 units will be sold.

Mozilla announces Popcorn.js 1.0

Mozilla has released version 1.0 of Popcorn (Mozilla's new HTML5 media toolkit) which is now available for download from popcornjs.org. The latest version allows Web film-makers to amp up interactivity around their movies, harnessing the Web to expand their creations in new ways. Popcorn.js source code is hosted on GitHub, and released under the MIT licence.

The release coincides with the world premiere of the 'One Millionth Tower' project, a Popcorn-powered Web documentary from the National Film Board of Canada. It is now available at Wired.com.
