

to Avast, the hackers are exploiting a critical hole in the TimThumb WordPress add-on to deploy malicious code on a large scale. The anti-virus firm has said that the attackers are installing the professional BlackHole exploit framework on the affected servers, which tries to infect visitors to the WordPress blog with malicious code. The framework tries out various vulnerabilities in the visitor's browser and installed plug-ins.

An anger-management app for Android!

Anger can be one's worst enemy. Get rid of it with this new anger-management app by EDB Media Inc. Called Personal Power Path Anger Management App, the app has been developed for Google's Android smartphones. It is a portable, affordable way for people to use proven anger-management techniques in real-time. The app includes step-by-step instructions, how-to videos, an easy-to-keep journal, inspirational messaging and community support, to help users keep their anger at bay.

IBM open sources messaging client Paho

IBM has disclosed the source code of its machine-to-machine messaging software to the Eclipse Foundation. Developed by IBM and Eurotech in 1999, the messaging client, called Paho, was initially designed for sensor devices that monitor pipelines. Paho runs the Message Queuing Telemetry Transport (MQTT), and is used greatly in embedded devices and smartphones. Recently, Facebook used it for its mobile messaging platform. The company believes that open sourcing Paho will bring network connectivity to a wider range of devices, sensors and appliances.

UNESCO's guidelines on Open Educational Resources

The United Nations Educational, Scientific and Cultural Organisation (UNESCO) and the Commonwealth educational organisation, the Commonwealth of Learning (COL), have announced the 20-page *Guidelines for Open Educational Resources (OER) in Higher Education* document. As per the newly published guidelines, universities need to develop strategies for including open educational resources in their programmes. Considering the increase in use of open educational resources, the document calls on governments to ensure that materials produced using state funds are made available under an open licence.

An Android-based smart-watch!

After smartphones and tablets, Android is set to become popular in the watch segment too. A company named 'i'm' has unveiled an Android-based watch called the i'mWatch. The company calls it a 'smart-watch', which can not only handle calls but also read SMSs. It also connects the users to an app store dubbed i'market.

Samsung Galaxy phones to support Hindi

Samsung has plans to enable its Galaxy smartphones with Indian languages including Hindi. The Galaxy series smartphones will get Indic input capability, starting with the Hindi language, via an update by December. Other languages are expected to be covered in due course of time.

Galaxy Nexus registration open in India

India is one of the 18 countries selected by Google to launch its upcoming smartphone, Galaxy Nexus, in the first phase, which commences later this month. The device features the new Android OS. Google has already started India registrations for Galaxy Nexus. The search engine giant has launched specific Web pages for India and 17 other nations, where customers can register for further updates about the various features and the availability status of Galaxy Nexus.

Google TV 2.0 released

Google has unveiled Google TV 2.0, its interactive television platform combining television, the Internet, videos on demand and several Web apps. It runs on Android 3.1 Honeycomb. The upgrade will be rolled out on Sony TV and Logitech Revue boxes. It consists of a revamped interface featuring a new customisable home screen and app short-cuts, providing hundreds of Android Market apps. It also claims to offer improved search for TV and YouTube.
