of the UV/Image Editor. Once you are satisfied, press F12 to render the scene. If it appears too dark, press the space-bar and add a lamp/sun light. If the texture does not seem to fit correctly, make further adjustments to the UV map by moving the vertices in the map in the UV/Map Editor. Look at Figures

4 and 5 for example results.

Creating a skeleton in Blender

The process of creating a working skeleton in Blender is a little different from that in other 3D applications. It begins by
