

after completing the whole program. Notice the *offset* value (4 in the URI); it increments by 2 (*record_per_page*) on each page forward, and decreases by 2, going backwards.

File displayview.php

```
<html>
<head>
<title>Display Grid Through Code Igniter</title>
</head>
<body>
Records Found: <?php echo $numOfRows[0]['count']; ?>
<br><br>
<table border=1>
<tr>
<td>S.No </td>
<td>User Name</td>
<td>Password</td>
</tr>
<?php foreach($contents as $users) { ?>
<tr>
<td><?php echo $users['userId']; ?>
<td><?php echo $users['userName']; ?></td>
<td><?php echo $users['password']; ?></td>
</tr>
<?php } ?>
</table>
<?php if(strlen($pagination)) { ?>
Pages: <?php echo $pagination; ?>
</body>
</html>
```

The view file is quite simple. We can add pagination at the end, if it exists. You can apply CSS according to your needs.

File displaymodel.php

```
<?php
class DisplayModel extends CI_Model{
function getRows($limit,$offset)
{
```

```
$query=$this->db->select('user_id,user_name,password')
->from('lfy_users')
->limit($limit,$offset);
$result=$query->get()->result_array();
return $result;
}
function countRows()
{
$query='select count(*) as count from lfy_users';
$result=$this->db->query($query);
return $result->result_array();
}
?>
```

The first function will fetch and return all data from the 'lfy_users' table to the controller. The second function counts the total number of records. You can also sort columns similarly; good documentation is available on the CodeIgniter Web portal.

I received many emails in response to the first part of this series, saying that these things can be easily done using simple PHP also. In order that you can understand the logic, I have chosen to use very simple examples. But if you are working on a project of ten thousand lines, and need to change something in your query, I am sure you will waste much time locating the query function, then editing it. In the MVC-based framework, you just open the model file and make the change. I have worked on a very large CodeIgniter framework-based project, and believe me, it is totally worth your effort. So Google about this more and more, and keep playing with it. Suggestions and queries are always welcome.
