

- **Non-transparent mode:** All client browsers' connection settings must change to have the proxy server as the IPCop Green IP, and the port as the IPCop proxy port (800). No IPCop configuration change is required. Some more IPCop Web GUI menus are listed in Table 4.

Table 4: IPCop GUI configuration

Menu	Explanation
System - Home	Connect / disconnect the Internet; view uptime
System - SSH Access	Select check box to enable SSH
Status - System status	Displays information about the various services running, disk usage, inode usage, uptime and users, modules loaded and kernel version
Network - Dialup	For PPPoE, you can configure the login name, password and even fall-back connection, if any. Under the reconnection option, you can select Manual, Persistent or Dial on demand. The last connects to the Internet only when a valid request for Internet resources is made by the internal network. It is disconnected if no Internet request is made for the Holdoff period of time.
Firewall - Port forwarding	You can forward incoming requests from the Internet to a particular system on the internal network (more on this in subsequent articles).
Firewall - External access	External management interface for the firewall to be enabled as and when required. It's best to leave this disabled unless it is required to be on.
VPN - VPNs	IPSec VPN for site-to-site or site-to-host connectivity
Various log menus	Includes days to keep log summaries. Sorting is based on reverse chronological order (last logs first), system logs – for IPCop diagnostics, Internet connectivity problem troubleshooting, etc.

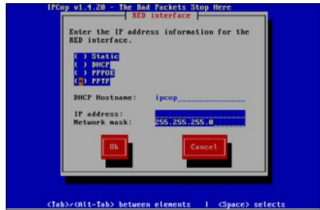

Figure 7: Red interface

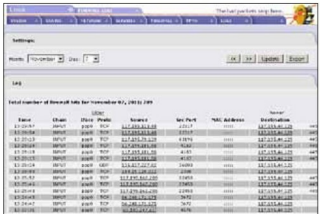

Figure 8: Firewall logs

IPCop provides excellent logging. To peek at an interesting log, check under **Logs—Firewall Logs**. Here (see Figure 8), all attempts to access your IP address from the Internet are logged. Click on the external IP address to do a whois query for the details and location of that IP!

This completes a basic IPCop installation. Keep watching for more on the installation of various add-ons and the exciting world of IPCop Firewall. **END**
