

“The need for Android expertise is spilling over from telecom to other sectors”

Android has always been associated with the telecom industry, being an OS for mobile phones and tablets. Few are aware of the use of Android in other areas of the electronics sector. Aseema Softnet Technologies is a Bengaluru-based organisation that focuses on product development services for mobile phones, and has been using Android since its original release through Cupcake, Donut, Eclair, Froyo and Gingerbread, to Honeycomb. Jalaja Ramanunni of the LFY Bureau caught up with **Samartha Raghava Nagabhushanam, CEO of Aseema**, who has been associated with the telecom industry for over 18 years, to know more about the young firm's association with Android, the value it can add to the process of project development, and more...

Q Could you elaborate on Aseema's open source offerings?

Aseema provides device engineering and ERP/ CRM solutions for mobiles. A core area we are focusing on is segment-centric tablets that can be used in the retail, educational, medical and other specialised areas. For these tablets, we do the device engineering and the required applications according to the segment we are focusing on.

Q Android is often associated with mobile phones. Is there an increase in the use of Android on other platforms?

Android is seeping into many devices in sectors other than telecom. The doors in the electronics device segment are opening up for Android. It is used not only in phones and tablets, but even the electronics sector. However, Android is comparatively a new phenomenon and the industry started waking up to it only about two years back. Hence, the sudden increase in demand. Not many people have worked on this platform, and as a result, you see a rapid need for Android expertise. Now, many organisations in India are building an extensive Android excellence centre.

There is an acute scarcity of Android expertise globally in the non-telecom market and this is felt especially in India, because the global market looks to India for such solutions.

Q What are the sectors driving this demand?

The requirement for people with Android expertise is highest in the telecom sector, closely followed by the electronics industry. Back-seat entertainment, retail dashboard activities, smart grid to optimize utilities, home entertainment, set-top boxes, television, etc, are also moving
