

SGX530 3D graphics processor. The device offers a funky user interface, which will allow kids to surf the Net and watch movies. It also comes with pre-loaded games, music, apps and books, including 15 free games, 30 free books and 50 free songs.

The tablet is available for pre-order at a price of \$200. However, the Nabi tablet is yet to hit Indian stores, and is currently available only in the US at Toys"R"Us and Babies"R"Us stores.

Philips unveils Android speaker docks

The world's first Android-compatible speaker docks have been unveiled by Philips. The docks have been specially designed to work with smartphones and tablets, and include a unique patented 'Flexidock' micro-USB connection, which enables charging and docking. The Flexidock can even be adjusted by sliding it up and down, to accommodate the location of the port. A free Fidelio Android app has been designed to be used with the three docks. It enables automatic Bluetooth pairing the moment the phone is docked.

WordPress powers over 60 million blogs!

WordPress, the online publishing platform, is both powerful and popular. The testimony is that it powers over 60 million blogs across the globe. Matt Mullenweg, founder, WordPress, said that WordPress is now getting more than 300 million unique visitors per month.

WordPress is open source software that can be downloaded to run blogs on the Web servers of choice. Citing it as 'just' the beginning of WordPress, Mullenweg said that development in WordPress for social and mobile platforms will amount to an even bigger growth in the times to come.

Here comes an open source display colorimeter!

Developer Richard Hughes has developed an open source colorimeter called ColorHug, which allows you to calibrate your screen for accurate colour matching.

The ColorHug is a 32 x 43 x 21mm device, and works only with LCD and LED displays. "My hardware has a GPL bootloader, GPL firmware image, and GPL hardware schematics and PCBs. It's faster than the proprietary hardware, and more importantly, a lot cheaper," quips Hughes.

The ColorHug takes 80 seconds to take several hundred measurements and create an ICC colour profile, which can be read by other operating systems, while its nearest-priced proprietary competitor takes five minutes.

FingerJetFX biometrics technology open sourced

DigitalPersona Inc, a global provider of authentication and endpoint protection solutions, has open sourced its MINEX-certified FingerJetFX software for fingerprint analysis. Device manufacturers and application developers can use FingerJetFX Open Source Edition (OSE) to convert bulky fingerprint images into small mathematical representations, called fingerprint 'templates', for efficient storage.

The software, released under the Lesser GNU Public Licence (LGPL), provides developers with the flexibility to adapt the extractor to their particular platforms and applications. The company has also announced a separate commercially-licensed version. It is said to add fast fingerprint matching for both identification and verification, while still using a small amount of memory.

Desura game platform launched on Linux

After a two-month beta period, the Linux client for the independent Desura game platform has now been released. The new release is an application that makes it easy to install, patch and play games on all Linux and Windows distributions, according to the developers. You are required to first sign up with a valid e-mail address in order to use the service and get games. At present, 65 games in various genres have been made available for Linux; there are also a few free games. The list includes the turn-based strategy game TripleA (free), the indie puzzle game World of Goo (£6.99), and the first-person shooter (FPS) Alien Arena (free).
