

“India needs thousands of trained Drupal developers”

Dries Buytaert,
the creator and
project lead of Drupal

Dries Buytaert, the *creator and project lead of Drupal*, recently visited India. He went back with a bright smile, vowing to return because he believes India is big news not only for open source development, but as a potentially vast market for Drupal. He has seen innumerable Drupal opportunities in India and plans to promote his ‘interesting animal’ here in the coming years. He spoke to **Diksha P Gupta** of **LFY Bureau**, exclusively, during his visit to India, and shared his plans to expand Drupal’s reach within the country.

Q With so many content management systems around, where exactly do you position Drupal and how are you different?

Drupal is an interesting animal if you look at it closely. It powers two per cent of websites across the globe. But what is unique about Drupal is that it scales from large websites to really small websites. It runs blogging websites but it also runs large media companies’ websites. It is also unique in terms of its features and functionality. Because of the Drupal community, there are tens of thousands of people actively contributing to it. We have more than 10,000 modules (a module is like a plug-in or extension).

Because of this, we have actually arrived at a point where we can build almost any kind of website with Drupal. That makes your question particularly interesting because you can use

Drupal for blogging, in which case we may compete with WordPress, and you can also use Drupal for creating large corporate websites, in which case we tend to compete with the proprietary enterprise software solutions. At the same time, you can use Drupal for external collaboration websites. In this case, we compete
