

Figure 12: Curve and surface parameters

menu). Play the animation (**Alt+A**). Using **Shift+D**, you could make multiple copies of the same animation and place them randomly before the camera. When you play the animation, it gives the impression of a whole school of fish swimming randomly. This is by far the best way of creating animation using the *Animate along path* method. Once you practice creating such animation you could fine-tune it to make it appear more realistic, perhaps by using the cube controls to move the fish fins back and forth, move the tail from side to side, open and close the mouth of the fish as it moves, and so on. There is no limit to the innumerable ways you can

Figure 13: Random animation using the path

make your animation more realistic. Figure 13 shows you the goldfish moving along randomly created paths.
