

YOU SAID IT

Kudos to the author of the Fedora Scientific Spin article!

I recently bought the 106th edition (the December 2011 issue) of *LINUX For You* magazine and am really loving it. Special accolades for the article titled 'Fedora Scientific: Open-Source Scientific Computing' by Amit Saha.

I am working towards my PhD in Physics at the Jawaharlal University in New Delhi. I work on Red Hat Enterprise Linux 5 on my workstation and CentOS on the cluster. I really needed a light and stable version of Linux OS for my laptop. The Fedora article made my wish come true. I have come to realise that the Scientific Fedora Spin would be the most suited operating system for my work.

Long live *LINUX For You*!

ED: It is indeed heartening for us that you enjoyed reading the December issue of LFY. We will certainly convey your words of appreciation to Amit Saha. More important, the fact that you found it useful for your projects means that the purpose has been served. Thanks for sharing your experience with us. Please do keep reading the magazine; we look forward to your valuable feedback.

Include graphics and gaming related articles

I thoroughly enjoyed the November and December issues of LFY. However, it would be great if you could include some open source programming articles related to graphics and gaming, for example, 'How to build a game with OpenGL'. You mostly carry articles to help people in various other fields like hacking, network administration, and so

on. How about including something on the subjects I've mentioned as well?

—Rohit, rohitd@graffiti.net

ED: It's great that you have told us what you would like to read more about. We will pass on your preferences to our editorial team and authors. Hopefully, you will get to read more on these subjects in the forthcoming editions of the magazine. However, you can also find some articles on the subject of gaming in our previous issues, which you can read online at [Linuxforu.com](http://www.linuxforu.com). Here are the links to two articles that will interest you.

Migration to Linux, courtesy LFY!

I have been reading LFY for the past one year. We run a small BPO and software company at Salem in Tamil Nadu. I feel proud to say that I have successfully convinced three people to use Linux. I am now slowly finding ways to migrate my BPO team, which has been working on Windows systems so far, to Linux.

I plan to put this mission on the fast track. I wish to thank LFY for invoking in me this passion and craze for Linux and open source!

I also have a request to make. We are currently using Fedora Linux in our software development projects dealing with PHP, MySQL, Perl and Java. We are on the lookout for an option like the multi-seat set-up in Linux, a configuration through which several monitors and keyboards can be connected simultaneously and two users can simultaneously share a single CPU. It would relieve us of the burden of investing in new systems and also cut down on operational costs on

devices like Emulation Baseboard, UPS systems, etc. I will be glad if you could provide a step-by-step article on using multiseat in Linux (Ubuntu or Fedora).

—Ananthavel.S,
ananthavel@gmail.com

ED: We are extremely thrilled to learn that LFY has motivated you to not only adopt Linux and open source but also spread the word! Such feedback inspires us to work harder and strive to make the magazine even better.

Interestingly, the January 2012 edition includes an article on a company named OrisysIndia, which has recently developed an open source solution for small BPOs, which, according to the firm, can reduce the infrastructure costs to a great extent. Hope you will find it interesting and useful.

But we do agree that multiseat configuration in Linux can play a prominent role in saving costs, and will surely try and include a few articles on the subject in one of our forthcoming editions.

Thanks again for writing to us. Please do keep sharing your views with us.

Subscribing to LFY, online

How do I subscribe to the LFY print edition, online?

—Jagan,
402jagan@gmail.com

ED: You can do so by going to the following link and filling in all the necessary details:
<http://electronicsforu.com/electronicsforu/subscription/subsc2scheme.asp>

Once you have subscribed to the print edition, you get access to the LFY eZine edition for FREE. This will enable you to access the latest magazine, online, even before your subscription copy reaches you every month or the
