

replacing GPL/LGPL dependencies," which he hopes could accelerate the development of Apache OpenOffice.org.

He also points to the accessibility work done in Symphony which makes it work better with assistive technologies, and to IBM's implementation of VBA macro support, as suitable candidates for merging. Another option for integration is potentially the Symphony UI; Weir says it has been reviewed well by the media and by users, and hopes the Apache OOo project will consider it.

A proposal is also being made to the Apache Software Foundation for it to incubate the ODF Toolkit, as an independent project for lightweight document processing in Java.

Mozilla lays out goals for multi-process Firefox

The non-profit organisation, Mozilla, has laid out plans for the engineering behind Firefox, with the aim to make the browser spread even more of its workload between multiple processes.

Mozilla's Chris Blizzard mentions in a blog post: "What this means is that every release of Firefox will get faster, more stable and have better multi-Web page interactive performance even if it doesn't include support for multiple processes. But we know that in order to get across some hurdles, we're going to need to invest in the multi-process model. That's what this post is about. Multi-process is not a panacea for any of these topics, but it does give us a leg up on some of the more systemic problems."

HTC to appeal against Apple patent ruling

As Apple wins a preliminary ruling from the US ITC (International Trade Commission) panel that HTC infringed two of the company's patents, HTC, which uses the Android operating system for its smartphones, said it would "vigorously fight" the infringement finding.

The US trade commission found the Taiwanese mobile phone company guilty of violating two Apple patents when it produced mobile phones based on Google's Android OS. Claiming that it has not violated any of the patents mentioned in the case, HTC said that it was confident it had a strong case for appeal. Apple is also wrestling with South Korea's Samsung and US-based Motorola over the rights to technology.

Eric Schmidt, former CEO and current executive chairman at Google, has also strongly criticised Apple's recent patent lawsuit against HTC. He stated that Google would help ensure that HTC eventually prevails in the case, the final ruling for which is expected to come from the full panel of the US ITC in December.

Inviting FOSS experts to write articles on their area of interest

LFY covers a myriad of topics—network management, software development, embedded systems, community issues, and even hands-on guide for newbies. If you've got an interesting topic, let us know. Thanks to the launch of linuxforu.com we are now trying to extend our content portfolio related to Linux & Open Source.

To know more on how to become an LFY author, contact us at

lfyedit@efyindia.com

Few topics that top our list:

- ◆ Tips 'n' Tricks for software developers or IT implementers
- ◆ Cool tweaks for FOSS enthusiasts
- ◆ FOSS on mobile
- ◆ Virtualisation (Implementation)
- ◆ OpenJDK or Java on Linux
- ◆ OpenSolaris (software development)
- ◆ How can I do 'that' on Linux
- ◆ Reviews of latest open source projects & tools
