Turtle Activity

Typing Turtle Activity

Etoys (Squeak Etoys) Activity

good pronunciation, particularly by slowing down the speed of the speech.

Typing Turtle is a useful way to improve your touch typing. *Memorize* makes memorisation painless and fun. *Implode* is a nice game for very young children; the objective is to get rid of groups of three or more blocks of the same colour. *Pippy* is a Python IDE with a number of examples, including sound and graphics, to help you learn programming in the Sugar environment.

TamTam activities related to sound and music appeal to me a lot. I would have loved music at school, had I been able to explore through such activities. These activities, though, are currently broken on Fedora 15, because of changes in *csound*; however, that should be resolved soon.

The best option is to explore what is available at <http://activities.sugarlabs.org/>. Sugar versions of Gcompris—and even Blender!—are available. The great thing about

the Sugar Desktop Environment is that it takes very little additional effort to add it to the existing Fedora installation. In case you prefer Ubuntu, you may check <https://wiki.ubuntu.com/Sugar>. It gives you a chance to try fun stuff. You may even get addicted and create some activities for the children, who will love you for it.

Creating and extending an activity or migrating an application to a Sugar activity can be an excellent BE project. These projects would be achievable within the time constraints, and still be very useful!
