

YOU SAID IT

July edition content was SUPERB!

 First of all, thank you so much for bundling so many interesting articles in the July 2011 edition of *LFY*. I am loving it to pieces. The 'Tips and Tricks' column is one of my favourite sections in the magazine and I have also sent my contribution for this section, which relates to a trick that I often use on my system to make life easier. I hope others too find it relevant.

—Amit Mehta,

ED: It's great to know that you liked the content published in the July 2011 edition of the magazine. We are also glad that you have taken the time to share your hands-on experiences with us. We are sure many Linux and open source lovers, who invariably like to explore new things, will benefit from your submission.

LFY: A treasure trove for Linux newbies!

 I am a regular reader of your magazine. It was during my college days itself that I had an interesting encounter with UNIX, which prompted me to install Linux and learn UNIX commands.

Of late, your magazine has helped me to install and configure Linux on my computer. The reviews of the latest distributions that are often included in the magazine help me in choosing a new Linux distro and trying it. The content of your magazine and the quality of the DVD that comes bundled with it, are very good. Your magazine is truly meant for Linux lovers.

—Vijay Kadam, Vijay.Kadam@intinfotech.com

ED: Thanks a lot for taking the time to send us this note of appreciation! It motivates us immensely to know that the content of the magazine is helping more and more people to explore the world of Linux and open source. That, in fact, is our aim; so feedback like yours just reassures us that we are on the right path.

Distro inclusion request for LFY DVD

 I very much want to try the PC-BSD operating system but I have a limited network quota. Will it be possible for *LFY* to include the 64-bit PC-BSD OS in the *LFY* DVD of the August 2011 issue? I will be very grateful if you can provide it.

—Saurav Sengupta,
saurav@celestialium.org

ED: Based on the results of the distro preference poll conducted on LFY's Facebook page, we are bundling BackTrack5 with the August edition of LFY. But we have taken note of your request and will try to bundle the PC-BSD distro in one of our forthcoming editions.

QEMU series bags appreciation

 I recently read the article on QEMU in *LFY*. I must say, it's a great article and has the potential to get everyone who would like to use QEMU, started up.

Keep up the great work! Eagerly looking forward to reading the next article in the series.

Also, could you tell me if it is better than VirtualBox and/or the VMware Player for virtualisation.

—Nikhil Bharadwaj, nikhilbhardwaj.1989@gmail.com

ED: Glad you like the QEMU series. We referred your note of

appreciation and your query to the author of this series, Manoj Kumar. Here is his reply:

Manoj Kumar: "Thanks a lot for appreciating the article. As far as virtualisation is concerned, QEMU has a different purpose. It can emulate an array of different processors. VirtualBox can not do that. VirtualBox is a better option when you use it for the desktop or server purposes. For embedded virtualisation, QEMU is the best option."

Queries related to CMS, and simulation software

 I have been a regular reader of *LFY* since its inception. Could I request that you consider introducing walk-through tutorials on open source software for beginners, such as:

1. Plone CMS, especially covering aspects like building websites with Plone. I am presently trying to build a website (in Hindi and English), but am finding it difficult to do so. I am a newbie in this field, and would like to solicit your suggestions and help in this regard.
2. Articles on simulation software related to electronics, networking, etc.

—S Srikamal,
kamal3965@gmail.com

ED: Great to hear from a regular LFY reader! We have taken note of your request and will try to include an article on the Plone CMS in one of our forthcoming editions. Regarding issues related to the website that you are building with Plone, you can post your queries on the Facebook page of LFY
